

**Epicor Workstation:**

For desktop / network clients, keep in mind that other installed applications, specifically Microsoft products, have requirements of their own over and above the requirements for Epicor Cloud ERP. The Epicor client will perform better on workstations that have sufficient memory and processor power to run all your applications.

	<b>Recommended Configuration</b>
<b>Operating System</b>	Windows 7, 8.1 Pro, 10 Pro/Enterprise (32-bit or 64-bit)
<b>Processor</b>	2.8 GHz or higher. Recommended dual core 32-bit or 64-bit processor and SSD drives
<b>RAM</b>	8 GB (add more RAM if the workstation is shared by multiple applications)
<b>Disk Space for Epicor</b>	3 GB
<b>Monitor</b>	SVGA or higher adapter Color SVGA monitor with 1024 X 768 resolution
<b>Internet</b>	There is no definitive calculation for required bandwidth as the company's overall use of the internet and the number of SaaS users impact the bandwidth required. As a general rule, the Epicor SmartClient or WebClient requires 128 - 500 kilobytes per second (kbps).

**Barcode Equipment (Support for Bar 39 Barcode)**

Motorola LS2208

**MES Workstation**

Same configuration as Epicor workstation

**Tablets**

Please use the above workstation sizing guide – if you are going to run a tablet, it must run Windows 8.1/10 OS (Note – it cannot run Windows Runtime (RT))

**Printer**

At least one laser printer required for standard reports and forms  
Must have current Windows drivers

**Apple Computers**

Will need to run Epicor Web Access or Bootcamp – please note that you will need to run the smart client on at least one machine for advance setup.

**Network**

A 1 Gbit (or faster) network is recommended. Fiber optic cable recommended in environment with electrical noise.
