- Improve team collaboration and communication

Redefining the Financial Planning and Analysis Process for Your Organization

Epicor Financial Planner (EFP) brings you a truly revolutionary financial planning and analysis (FP&A) solution that promises not to take away significant time from your finance team.

After the five-minute installation and setup, you get out-of-the-box actuals, budgets, and live forecasts. You can even create budget reports from scratch in just a few minutes. To ensure your business can react to market stressors, EFP offers you a radically improved way of working with financial planning and analysis.

EFP streamlines and automates time-consuming, error-prone tasks for your finance team so you can focus on high value-yielding responsibilities. It uses a pragmatic and intelligent workflow that makes working and collaborating quick and easy.

You can now make informed decisions using the valuable business insights you will gain from your FP&A process, and you can improve your finance team's efficiency while keeping software costs to a minimum.

Epicor Financial Planner Is:

- Multicompany
- Multicurrency
- Multisystem
- Multi-scenario

- Prepackaged with finance logic such as cash flow, CAPEX, and consolidation
- Easily scalable
- ► ERP system or line-of-business system agnostic

Simpler, faster, and laserfocused collaboration

Previously, collaborating with your colleagues meant you sent out entire spreadsheets for checking and approval. With EFP, you now have the ability to highlight only the cells you want changed, put in explanations, and then submit it for checking and approval. Meanwhile, when the approver gets it, it will have the highlighted cells and an explanation of what's different.

After being checked and sent back, you will then have color-coded cells that indicate whether they are approved or not and why. This fundamentally changes the way you collaborate within the organization. It is now faster, simpler, and more focused—ensuring your entire team not only saves time, but also focuses their energy and effort into more important tasks.

Advanced calculations and logical business mapping tool

EFP allows its users to perform complex and advanced rule-based calculations that can be automated such as cash flow and other standard statistical accounts or HR rules

Sleek-looking and easy to use

Without a doubt, EFP looks more sleek, modern, and intuitive.

Your menu options can be found on the right and left side of the tool for ease of use and clarity.

The web version is purely focused on ease of use for business users.

Improved, unified, and simplified organization management

EFP automates and unifies management of security, workflow, access, and distribution of tasks and follow-up reports.

It is designed to make managing access and tasks effortless.

Security access designed to fit the way you work

Do you need specific people to access the FP&A solution a few times a year? Do you want them to see only certain information that concerns their line of work?

Epicor Financial Planner offers rolebased security to give each user in your organization access to functionalities and data needed to fulfill their role in an easy way. Whether you need your people to access EFP daily or once a year, EFP supports your way of working.

Business Suice Support No. 1000 Services Business Services Business

The platform that ties all your technology investments together

One of EFP's strongest capabilities is its integration. EFP offers you and your organization a smooth flow of information across systems because it can integrate with your ERP system or any of your line of business systems.

With EFP, you are afforded a single source of verifiable information across the organization and you can be guaranteed that all your previous technology investments will be maximized as EFP ties all of these systems seamlessly giving you an FP&A process that is accurate, reliable, and auditable.

EFP has built-in on-premise connectors so you can enjoy the benefits of doing FP&A in the cloud while still running on your on-premises system.

Seamless integration with Epicor

- ► EFP integrates with cloud ERP systems and on-premises ERP systems alike
- OLAP cubes/data warehouse database tables stored on powerful servers in the cloud—relieving your ERP from reporting burdens
- Import of initial budgets from Excel or external files—where you need to include COA
- Budgets can be uploaded back to ERP system
- External data sources supported via Excel or web services
- Export to Excel from web
