BlueVoyant®

VENDOR RISK MANAGEMENT

What we do at BlueVoyant

We **DON'T** just tell you the cyber risk of your supply chain.

We **DO** tell you and your vendors **WHAT** to do about it and **HOW**.

Then, we tell you **WHEN IT IS DONE.**

"We don't have the people to continuously sort through more cyber risk data on all our vendors, eliminate false positives, communicate the most important speci ic remediations, and track implementation."

For more information, contact Ewen O'Brien, Head of Cyber Risk Management Services Sales ewen.obrien@bluevoyant.com | +44 7464 610777

HOW WE WORK

Step 1

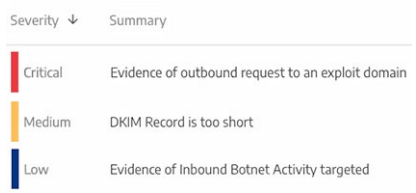
Continuous curation of external cyber risk score

The cyber experts in our 24x7 Risk Operations Center (ROC) curate cyber risk scores on all your vendors, all the time.

They leverage our automated playbooks to reduce false positives - e.g., guest networks, security devices.

Step 2

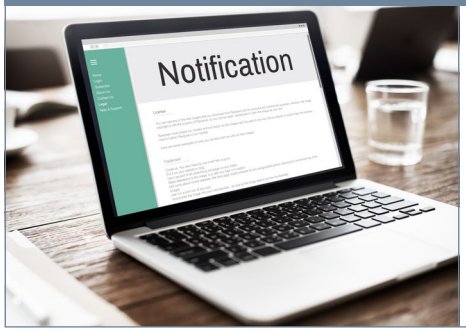
Critical remediation actions identified



Our ROC uses automation to identify the handful of remediation actions needed for each vendor exceeding the risk threshold set in our onboarding process.

Step 3

Actionable remediation steps sent to client and vendors

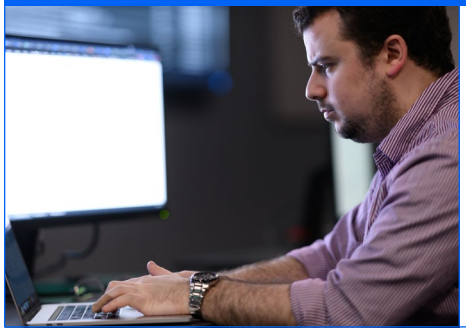


These remediations are tracked in our portal and an auto-generated email sent to vendor.

Also available to clients via API.

Step 4

Remediation status tracked and follow-ups as needed



Our ROC tracks remediations and risk scores updated daily.

Non-responsive vendors identified and escalated to client.

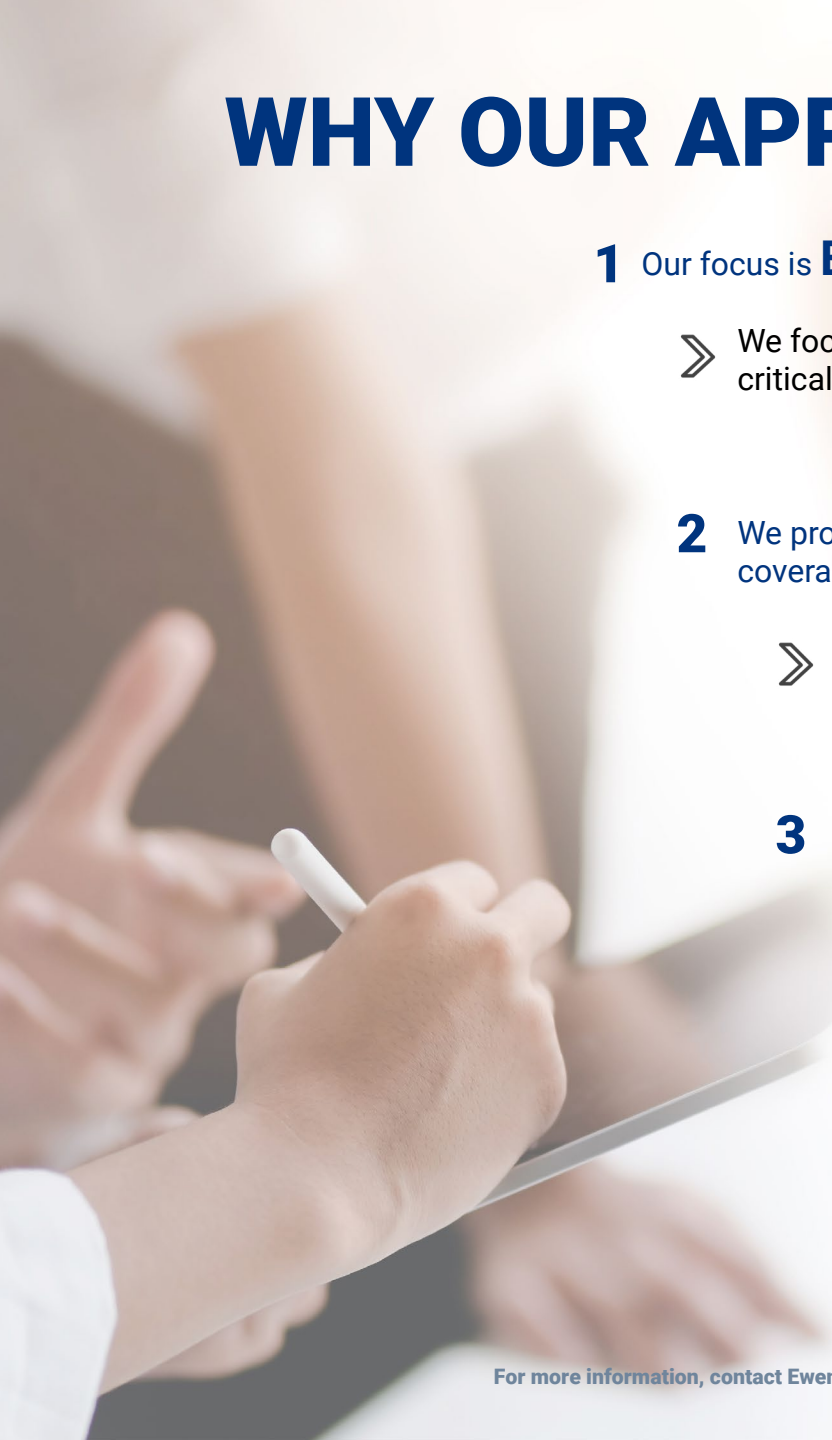
WHY OUR APPROACH IS BETTER



1 Our focus is **Effective Action**, not just Reporting

- We focus on vendors with excessive risk and specifically recommend critical remediations

2 We provide **Expert 24/7 Leverage** to your team enabling effective coverage of all your vendors, within the capacity of your existing team

- Cyber Risk is concentrated in the long tail of hundreds or thousands of suppliers

3 **Automation Assisted Expertise** is key

- Our Risk Operation Center is led by highly trained former cyber offensive personnel
- Leverages millions of dollars in security alert processing technology

4 We have **Exclusive Data Sets**

- And we process millions of data elements a second in near real-time
