

## **JGC has been appointed as the New Distributor of YellowScan in Greece**

Montpellier, France and Maroussi, Greece – January 20th, 2022 – YellowScan, a global leader and designer of next generation of LiDAR solutions, announces an addition to its global distribution network, JGC. Established in 1999, JGC offers the Greek market the most technologically advanced Geoinformation Systems and satisfies the highest demands of modern applications in engineering fields

We are confident that our partnership with JGC will provide our customers with an outstanding quality and exceptional customer service, considering their needs and recommending the best solutions.

“YellowScan distribution with JGC is a crucial step to better serving our customers in Greece,” said Laure Fournier, Sales Manager at YellowScan. “With their history in the geospatial industry, JGC has built an excellent reputation we are delighted to benefit from. We welcome JGC in the growing network of the YellowScan family.”

Founded in 2012, YellowScan has customers around the world, and its products are used in surveying, forestry, environmental research, archaeology, industrial inspection, civil engineering, and mining sectors. Our innovative LiDAR solutions are complete hardware and software platforms, easy to use data collection tools combined with an unparalleled level of training and support from our experts.

### About JGC

**JGC Geoinformatics Systems S.A.** represents leading high-tech systems manufacturing houses in Greece, Cyprus and the wider Balkan region, providing innovative products and solutions since **1999**.

### Products

**JGC** offers the most advanced topography systems (GPS, Total Station), Hydrography (Multibeam, Echosounder), Three-Dimensional Documentation (Laser & Optical Scanners), Geophysics (Geo-radar, Detectors), Thermography, Drones & UAV, Safety Equipment (antidrones, XRAY, OTS) and generally scientific equipment that opens new horizons in the applications of modern engineering with innovative technologies and techniques.

### JGC-Net Network

**JGC** is the first Greek company that since 2006 has established and operated a Permanent Reference Station in Greece, providing RTK and Post-Processing data to interested parties. Today, **JGC-Net** is implemented by receivers that support signals from all satellite systems, i.e., GPS+GLONASS+GALILEO+BEIDOU. The existing network covers the whole of Greece with Flying RTK with an accuracy of 10-20cm and many prefectures of the country with an RTK accuracy of 1-3 cm, while it is also possible for post-processing with 1 sec space data.

### Integrated Solutions

In the context of continuous technological development and increased demands, our company offers a series of integrated solutions that include hardware, software and configuration according to the needs of the customer aiming for the seamless use of the equipment and the reliability of the solution over time.

### Service

Our company has a complete and certified **Service Department** for all the products it represents in the Greek market, staffed with well-trained, trained and experienced personnel that ensures fast and reliable maintenance and repair of the instruments we trade.

### People

**JGC** is staffed by experienced Engineers with many years of experience, University and Postgraduate studies in the respective fields of specialization, as well as an average experience of more than 15 years. The continuous strengthening and increase of human resources are a stable pillar of development and provision of high-quality services.

### Find us

The company is housed in a modern office building of a total area of 450sq.m., **in the center of Maroussi** (near the train station). The infrastructure of the building includes the offices, the accounting department, the warehouses, the service, the exhibition space, the conference room, the seminar room and underground parking.

This way, the excellent service and support of the company's customers are achieved.
