Accurately manage daily routines

> Take care of all the daily routines in your pharmacy, **from back office to POS.**

> Manage paper **prescriptions**, e-prescriptions, veterinary prescriptions and more.

> Offer **generic equivalents** or parallel substitutions for pharmaceuticals.

> Track expiry dates, recalls, and print **reports**.

> Sell medications and health & beauty items in the **same transaction.**

Put your customers first

> Ensure **customer safety** with pick control, FMD control, and pharmacy-specific user permissions.

> **Find each customer** in the system by name, address, or SSN straight at the POS.

> Offer **appointments** for services such as blood pressure monitoring or vaccinations.

> **Reward** loyal customers with points and personalized deals.

Effectively track stock and replenishment

> Track and manage your **stock** across all stores, including the eCommerce.

> See stock available in other locations and request item **transfers**.

> Automate **replenishment** for specific pharmaceutical and retail items or for some locations.

Connect online and physical stores

> Let customers order prescriptions online and **click & collect** in store, or get the order delivered home.

> Set up a **subscription service** for prescriptions, nutritional supplements, or any other item.

> Let customers check on your website at which location specific items are **available**.
