ANUBIS EMAIL SECURITY

Service cloud for Enterprises

For medium and large organizations, our MPS solution (appliance/ VM based) is based on the same carrier grade system that protects Internet Service Providers and Carriers worldwide.

ENTERPRISES MAIN BENEFITS

Protect Your Ecosystem
By ensuring legitimate email is received and delivered (important for reputation management), and by setting Anti-Botnet, Control and Quota management features, our solution ensures your email ecosystem is failsafe with this carrier-grade solution.

Increased Productivity
By placing your messaging security infrastructure at the perimeter, and by optimizing operations with Helpdesk accounts, multitenant delegated management, message tracking and several easy ways to manage quarantine.

Reduce Your Total Cost Of Ownership
With a robust platform under a transparent business model, with long-term advantages (like, for instance, free SW version update), and a world renown hardware support. Moreover, web services based architecture and integration with your directories and third party systems, this solution evolves with your infrastructure.

MPS CHARACTERISTICS

AnubisNetworks
Global Threat Intelligence Platform
AnubisNetworks’ security ecosystem permanently monitors the world for Botnets, IP Reputation, Email phishing and Malware campaigns, and communicates with MPS edge filters, for real time proactive malware prevention.

Control Features on top of Security Features
DLP (Data Leakage Protection), Quota Management, Rate control, Email Validation, transport Encryption and many other features are available per user and per scope, taking this platform far beyond Email Security.

Complete Visibility on your platform
Complete details on messages and queues for inbound and outbound flows. MPS also contains several dashboard data, system auditing, business information tools, and hardware and software monitoring, each feature configurable by scope and data.

Lean Management of Quarantine
Quarantine can be managed by IT and/or end users, in a centralized console, with the option of web end user interface and/or email interface (via periodic digests).

Hierarchic Multitenant System for Inbound and Outbound
An advanced architecture with several administration scopes (Virtual scopes, SMTP domains and LDAP based Organizational units), each with distinct roles - including Helpdesk users - for both centralized and delegated management.

Email Secure Routing and Virtual Aliases
MPS brings a new dimension to email routing management by enabling the usage of BCC, Email Queue holding, Distribution lists, Virtual Aliases, and Listeners based routing. E-mail is verified for SPF, TLS and DKIM encryption mechanisms.

ANUBIS EMAIL SECURITY
Service cloud for Enterprises

ARCHITECTURE

Filtering & Security
• Real-Time reputation analysis
• Anti-fraud enhanced phishing and spoofing detection.
• Anti-Directory Harvest Attack
• Encryption layer DKIM / Sender ID / SPF verification / support
• Spam waves protection
• All Email Parts Heuristic analysis
• Regular Expressions
• Sophos, ClamAV & integrates with other AVs
• Zero hour burst Detection

Email Control
• DLP - Data Leakage Protection
• Multitenant Quota management
• White & Blacklists inheritance
• Attachments Discovery
• BCC and Archiving plugins
• AD integration for AAA

AnubisNetworks Technologies
• MPS HDB Fingerprinting
• AN MailSpike® IP Reputation
• Social Networks relationship
• Threat Intelligence for MPS

Network and Integration
• SOA / Web Services
• Next hop server configuration
• Full IPv6 capable
• Syslog based log integration
• Email Spoofing & Rate control
• Integrates with Google for Work and Microsoft Office 365

Business Features
• Quarantine HTML digests up to per hour
• Complete Outbound Administration
• Business reporting and Usage KPIs
• Per-scope full OEM customization
