

An asset management company

A security solutions case study

An asset management company required a security solution for its new office space near Bank. AIS, the appointed fit-out company, required a partner who could deliver the installation of CCTV cameras and the client's chosen access control system on time and to budget.

Key issues

The client wanted to install the same access control system they have in their European head office to allow for key personnel to travel easily between the two offices using the same cards and badges.

Ace approach

As we were working with a European access control system, the project required careful management to ensure we had everything we needed to complete the install. We liaised directly with a provider in Europe to get the goods and services delivered to the UK.

We were able to get the goods across to the UK and we installed 15 access control points across the two floors of the building occupied by the client. We also installed CCTV throughout the space, including 9 Hikvision cameras.

We provided a dedicated Project Manager who acted as the key point of contact for AIS and managed all liaisons with the European provider. The Project Manager was also onsite throughout the installation to ensure the design specifications were met and the project was completed on time.

Outcome

The installation was completed on time and within budget, and the client has peace of mind that their people and assets are protected by a security solution they trust and that they have ease of movement between their sites.

- Commercial property
- UK
- £76k project
- 40,000 sq ft
- Design and installation
- Security Systems
- Collaboration with Fit-Out partner

About Ace

Ace Fire & Security offer a complete fire, life safety and security solution for commercial and industrial site owners, operators, maintenance and facilities companies. Working for over 5,000 customers on over 7,000 sites across the UK and internationally, we ensure that commercial, industrial and residential properties enjoy world class service focussed on demonstrable building and life safety, security and compliance.
