VMware Cloud on AWS Hybrid Cloud Readiness Assessment

The VMware Cloud on AWS Hybrid Cloud Assessment is an outcome based opportunity which enables you to prepare your organization to adopt a Hybrid Cloud strategy. The VMware Cloud on AWS Hybrid Cloud enables you to achieve your cloud strategy faster and more cost-effectively. The TeraMach Hybrid Cloud Assessment addresses Hybrid Cloud use Cases, Private Cloud Assessment and Network Connectivity.

TeraMach, a Services lead organization provides strong leadership in a practiced, proven and proficient manner. The TeraMach professional services organization has a deep and strong knowledge of both VMware and AWS which provides you the peace of mind when assessing, architecting, implementing and migrating your workloads to VMware Cloud on AWS.

Our vision is to be the stewards of transformation

For our customers
For our partners
For our community

Lead
Create an ecosystem that places our Customers at the heart of transformation

Accelerate
Act as Pioneers to bring new innovations to market that empower our customers

Scale
Extend our Talent and Expertise beyond traditional means of doing business

USE CASE

VMware Cloud on AWS provides several Use Cases that align with your organizations business outcomes to ensure the outcome requirement is in alignment with your business. Whether you are looking to Extend your Datacenter for cost-effective on-demand scaling, deliver Disaster Recovery, move your apps to the cloud without any need to rework them or integrate with native tools from AWS, TeraMach can help define the Use Case with you.

ASSESS

Knowing what you have is sometimes the hardest part of migration. The TeraMach Private Cloud Assessment will collect data from your existing environment, provide recommendations on right-sizing your existing workloads and size the VMware Cloud on AWS environment to ensure you only pay for what you need. TeraMach can also provide an application dependency mapping assessment which can be utilized to provide a zero-trust framework for your Private Cloud or Hybrid Cloud environment.

NETWORK

Connectivity to the Cloud can be a challenge and getting it right before turning on a new service is critical to ensure customer satisfaction, whether external or internal. VMware Cloud on AWS provides many options for connectivity. Aligning these options with requirements needs to be addressed along with any security requirements if your applications require them. At TeraMach, we have a long history of Cloud connectivity and getting it right for our customers. Our Security framework will provide you with the options needed to protect your data and users.

Simplicity

TeraMach believes in the art of engineering simplicity. We are focused on solving customer business challenges and outcomes. We leverage our strategic partnerships and architectural capabilities to deliver high value results that integrate digital solutions seamlessly into our customers environment.

Experience

We strive to anticipate our customers' requirements and quickly adapt our organization to the dynamic digital landscape. We leverage our innovative services and methodologies to create a new dimension for continuous innovation and transformative user experiences.

Efficiency

TeraMach leverages our connected ecosystem of partnerships that drives performance. We continually optimize our operations and services to gain efficiencies to accelerate decision making capabilities and ultimately increase value to our customers.
