# Connectivity

Establish a future-proof network backbone that leverages innovative provider technologies to simplify network management and reduce costs

## Global Internet and data technologies that give your business a competitive advantage.

According to Gartner, digital business requires that enterprise networks become significantly more agile, to allow the rapid accommodation of new endpoints, new applications and new network capabilities. However, enterprises continually need to do all of this, while optimizing their WAN expenditure.<sup>1</sup>

Whether you're connecting your office to the Internet, data center, or multiple corporate locations, designing and right-sizing your network to meet your diverse needs is a critical and complex undertaking. From legacy services, including DSL and MPLS, to the latest in SD-WAN and SASE solutions, Advantage has the expertise and provider relationships to transform your IT organization and optimize utilization now and in the future. You define your goals and objectives and we fit you with a variety of solution options that are purpose-built for your needs.

The result is a network backbone that enables your users to connect reliably across your geographic footprint and support your clients in a more efficient and reliable manner. More reliability in your network translates to a better experience for your employees and the experience they provide to your clients.

 **Features & Benefits**

- ✓ **FLEXIBILITY**  
Increased bandwidth, centralized management, and overall network visibility from optimal providers
- ✓ **PERFORMANCE**  
Prioritize critical applications and data packets for increased speed and reliability across the network
- ✓ **SECURITY**  
Detailed reporting visibility creates greater insights and protections against malicious usage
- ✓ **COST OPTIMIZATION**  
Leverage the latest technologies across global providers to optimize spend and ongoing management

# Why Advantage?

## We optimize the technology lifecycle

Advantage is a managed service provider that drives value to your organization through five key stages in the technology journey. Employing expert practitioners, efficient processes, and a unique software platform, we solve the challenges of managing technology in the modern enterprise.

### DESIGN

Based on your business drivers and global best practices, we create purpose-built solutions leveraging leading technologies and ideal providers.

### SOURCE

Leverage our experience, benchmarking, and global partner network to select service providers, negotiate the best possible terms, and contract for the lowest rates.

### INSTALL

Capitalize on our project management leadership for a seamless rollout of new solutions and the timely disconnect of legacy services.

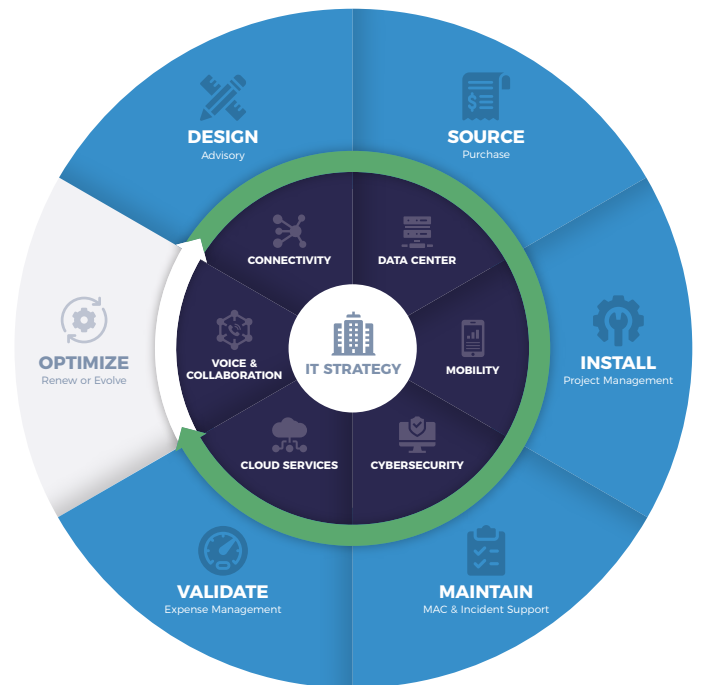

### MAINTAIN

Ongoing managed support of daily activities such as moves, adds and changes to your services, while having full visibility into your inventory through our Command Center platform.

### VALIDATE

Receive ongoing managed services to support the invoice lifecycle, including contract management, expense validation, dispute resolution, and AP/GL feeds for payment.

From procurement and provisioning through inventory and expense management, we optimize your communications solutions across voice, data, cloud, and mobility. Advantage is your team behind the scenes—so you can focus on success.
