Intelligent mobile location services

Whether voice or text, in an emergency, having accurate location is critical for rapid service dispatch. TEXTBLUE offers wireless carrier and web location services with on-demand location routing for major incidents.

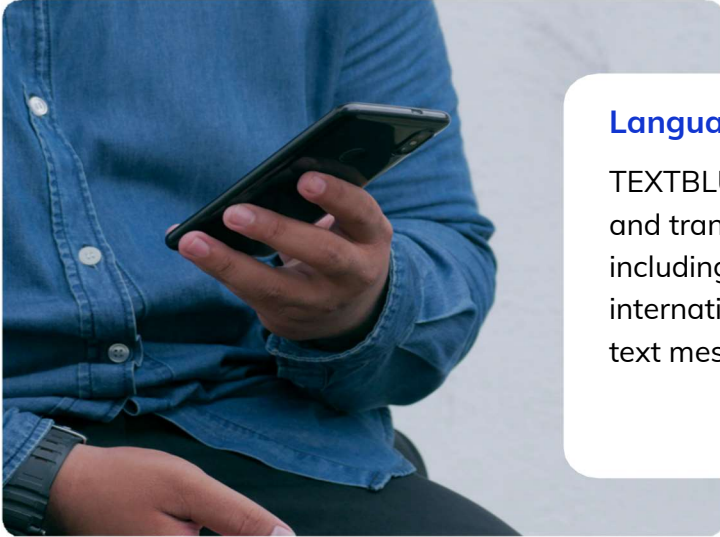

- ✓ Solicited smartphone carrier & web rebid
- ✓ On-demand geofencing for major incidents
- ✓ Automated replies and custom routing

Streaming video on-demand

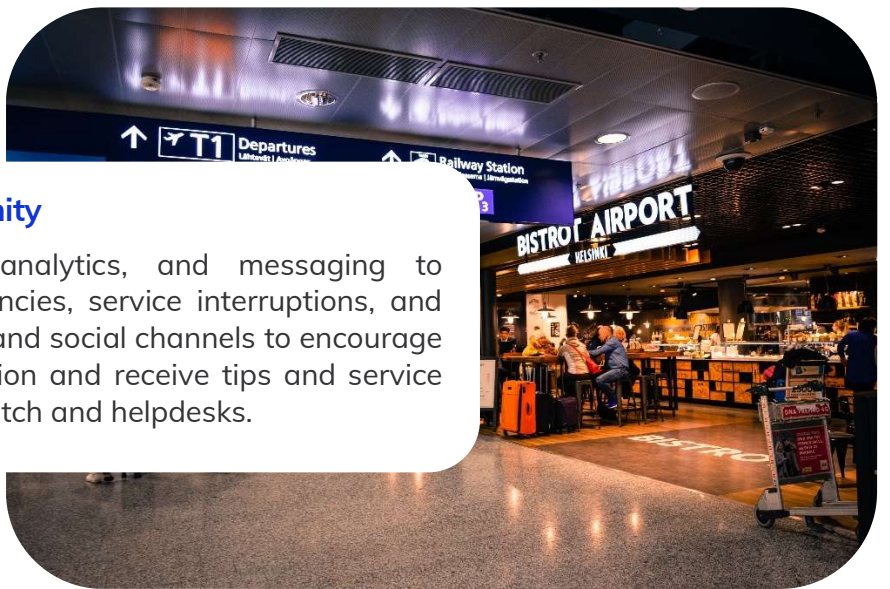

Pictures and streaming video may be worth a thousand words in an emergency situation. TEXTBLUE orchestrates a multi-user, streaming video webinar session on-demand.

- ✓ Standard carrier services and browser
- ✓ Solicited by dispatcher
- ✓ Archival and reporting
- ✓ No app downloads, no sign-in
- ✓ Artificial intelligence routing coming

Language Translation and International Support

TEXTBLUE automated translator seamlessly detects and translates messages across a variety of languages, including support for special characters. A commercial international SMS number is also available to facilitate text messaging from international phones.

Engage the community

Combine contacts, analytics, and messaging to communicate emergencies, service interruptions, and news. Leverage text and social channels to encourage community collaboration and receive tips and service requests both to dispatch and helpdesks.
