

CareSimple™

## **CARESIMPLE DIABETES**

Bring support and simplicity to your patients with diabetes, providing them with remote patient monitoring that keeps them out of the pharmacy.

# CARESIMPLE DIABETES

CareSimple Diabetes is the simplest way to offer remote patient monitoring to your patients with diabetes. Combining a cellular glucometer, unlimited consumables, award-winning patient education, data analytics, EHR integration, home delivery logistics and senior-friendly technical support CareSimple Diabetes takes out technical and operational complexities to let you focus on delivering an exceptional virtual care experience.

## HOW IT WORKS

### 1 Onboard patients

Order new patients, selecting the CareSimple 4G Blood Glucose Monitor and one of the available diabetes care plans (type 1, type 2, gestational diabetes). You can onboard patients from the CareSimple portal, in bulk or directly from your EHR.

### 2 Home delivery

CareSimple delivers a glucometer, 100 strips and 100 lancets. The CareSimple 4G Blood Glucose Monitor automatically transmits readings directly using cellular network, meaning that your patients don't need to do any setup, pair the device, or download an app.

### 3 Unlimited consumables supply

After 3 months, your patients are automatically enrolled in the CareSimple Diabetes program. No order is needed from care managers or patients as CareSimple delivers quarterly supplies of strips and lancets based on the recorded usage of the first 90 days.

## FEATURES

### Cellular blood glucose monitor

No app, pairing, WiFi, training or technical setup are required.

### Uninterrupted consumables supply

CareSimple delivers quarterly supplies of strips and lancets based on prior usage.

### Home delivery logistics

Devices and consumables are delivered to your patients, or to a central location.

### Award-winning patient education

Engaging and easy-to-understand Healthwise® articles and videos for your patients.

### Data analytics

Review alerts and trends using the CareSimple care manager dashboard.

### EHR integration

Onboard patients, receive vitals in near real-time and automate reporting in your EHR.

### Technical support

Patient-facing and clinical technical support available by phone, email or messaging.
