

# How to setup a Website

Building a Website is easy! Create, design and manage your own website - no experience necessary.

Follow these 8 simple steps to get your business online in under 30 minutes with our easy-to-use designs.

1

To start you will need to add your **business name, phone number and address**. To continue with setup you will need your payment details handy.

2

Whats's your Business Name?

your business goes here

About your Business?

a brief but catchy explanation of what you do, and what makes you unique works best.

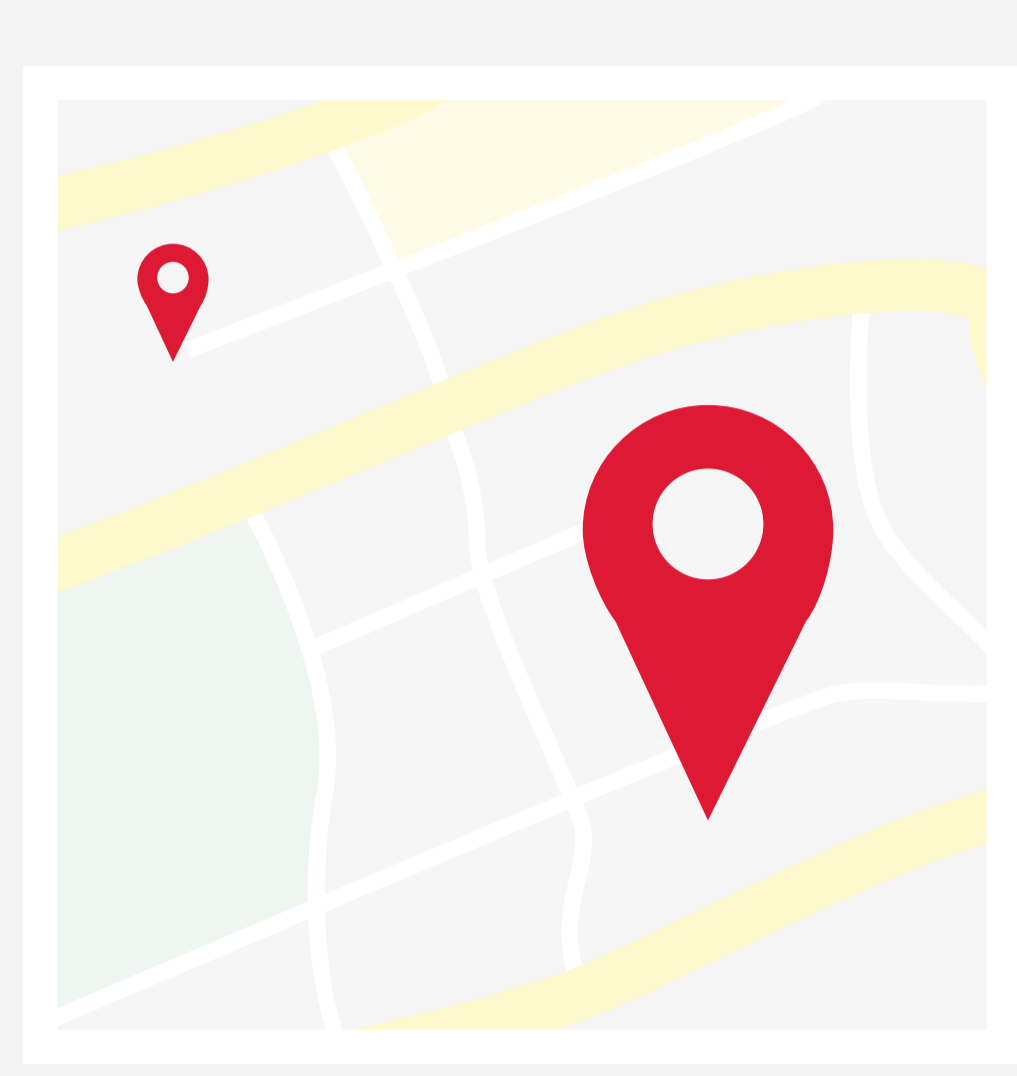

For the description

You could also include a mention of how your business got started.

For your logo, a PNG file with a transparent background gets the best results. But it must be under 2MB.

3

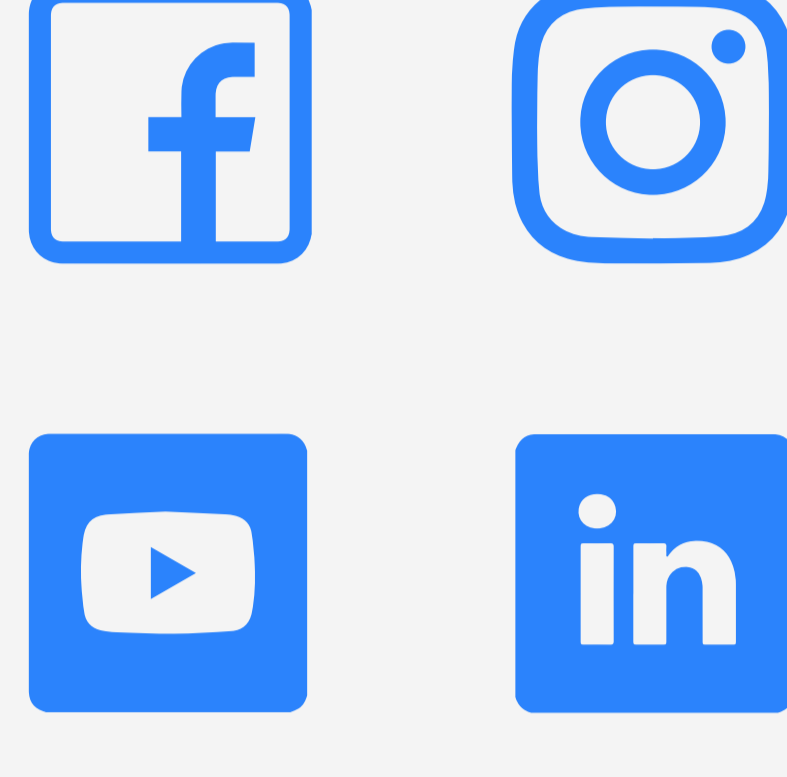

A **location** contains information such as your **address, opening hours and contact information** for each of your business locations.

The contact information for your main location will be displayed on your website.

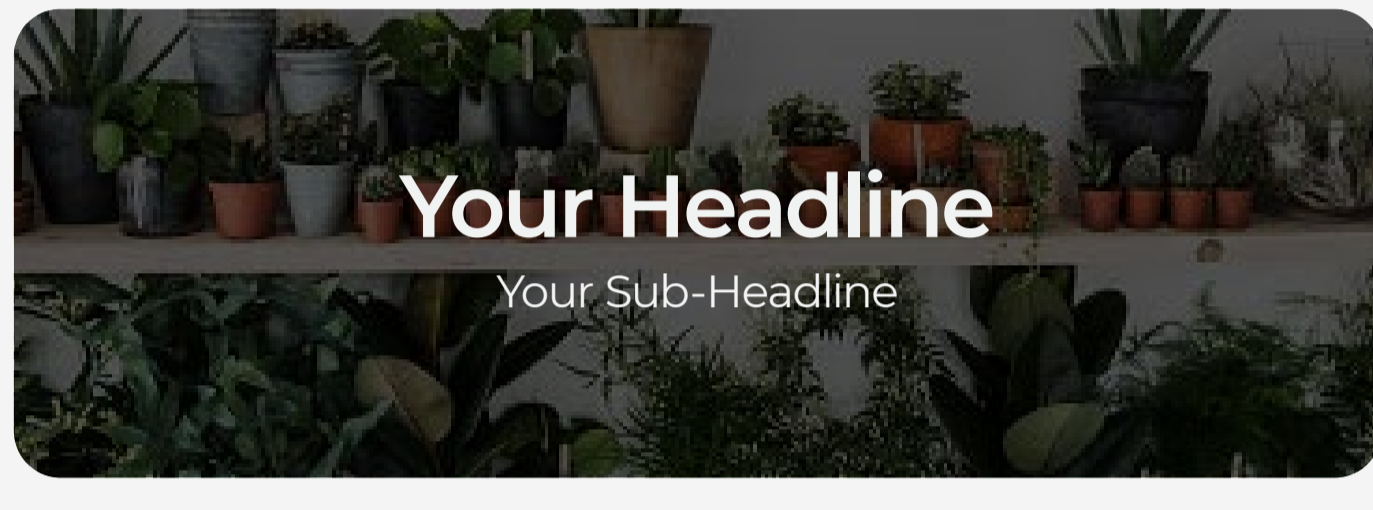

You can add multiple business locations if required.

4

If you have existing **social media** accounts you can link them! These can be added or amended later from the management portal.

5

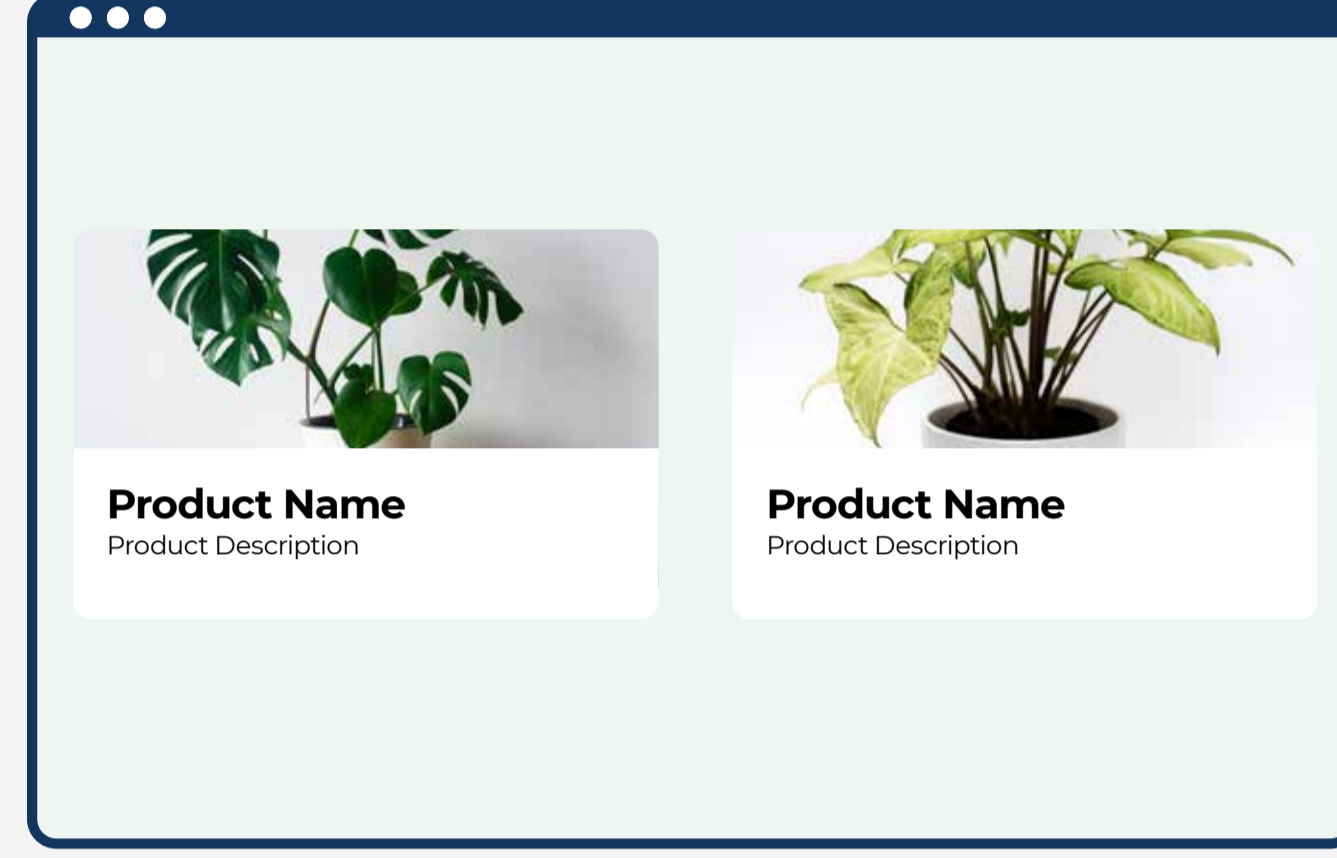

The first thing your customers will see on your website is the **banner image**.

We'd recommend using:

- Rectangle image of the highest resolution
- At least 1600px wide to avoid graininess
- An image with an aspect ratio of 16:9 works best

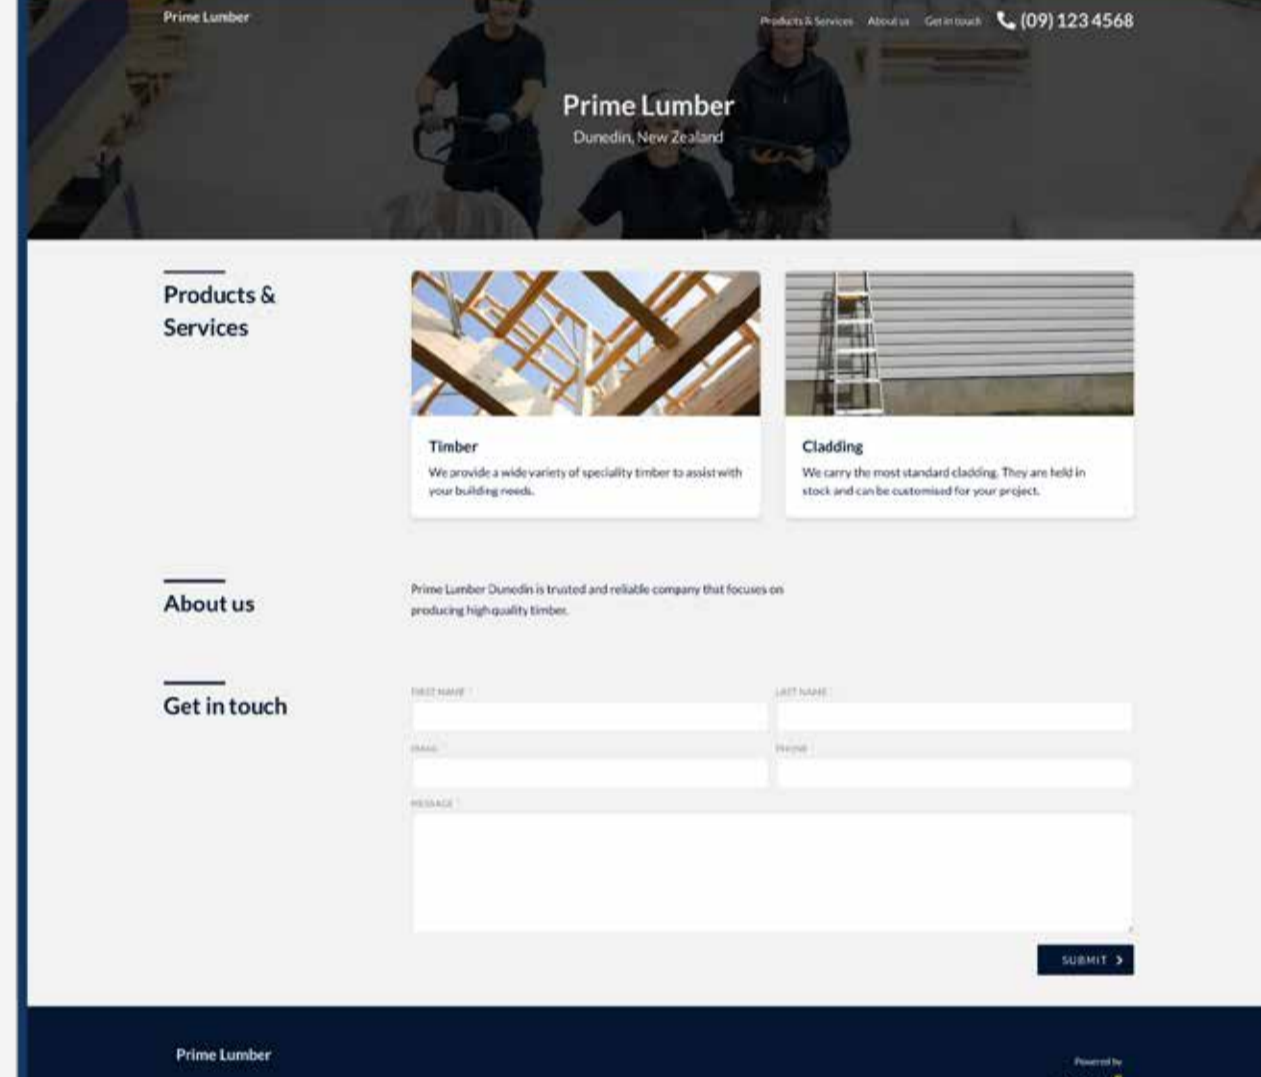

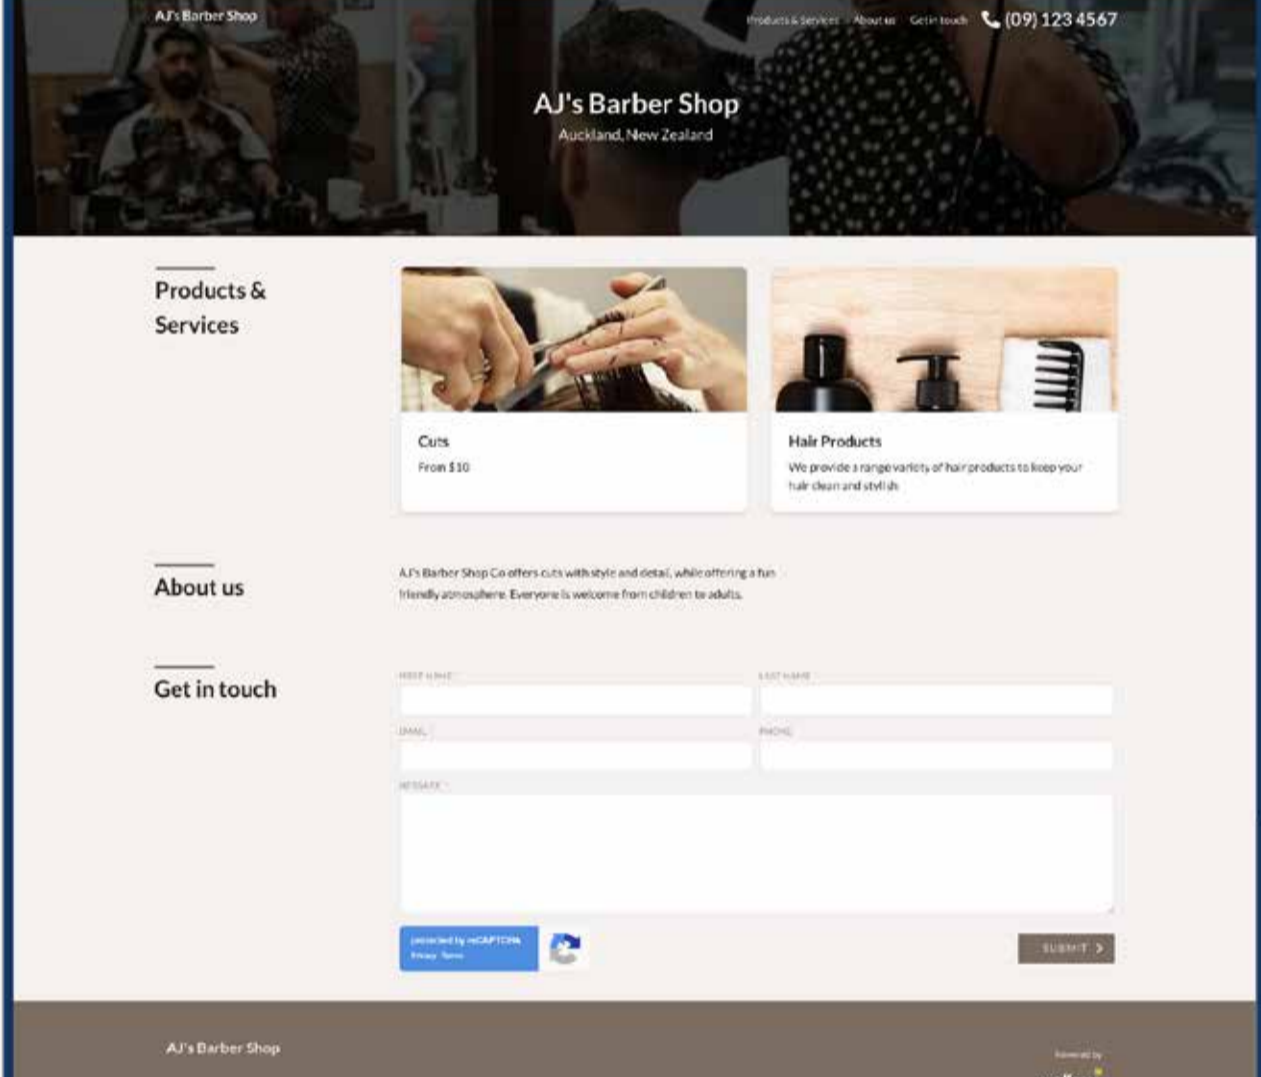

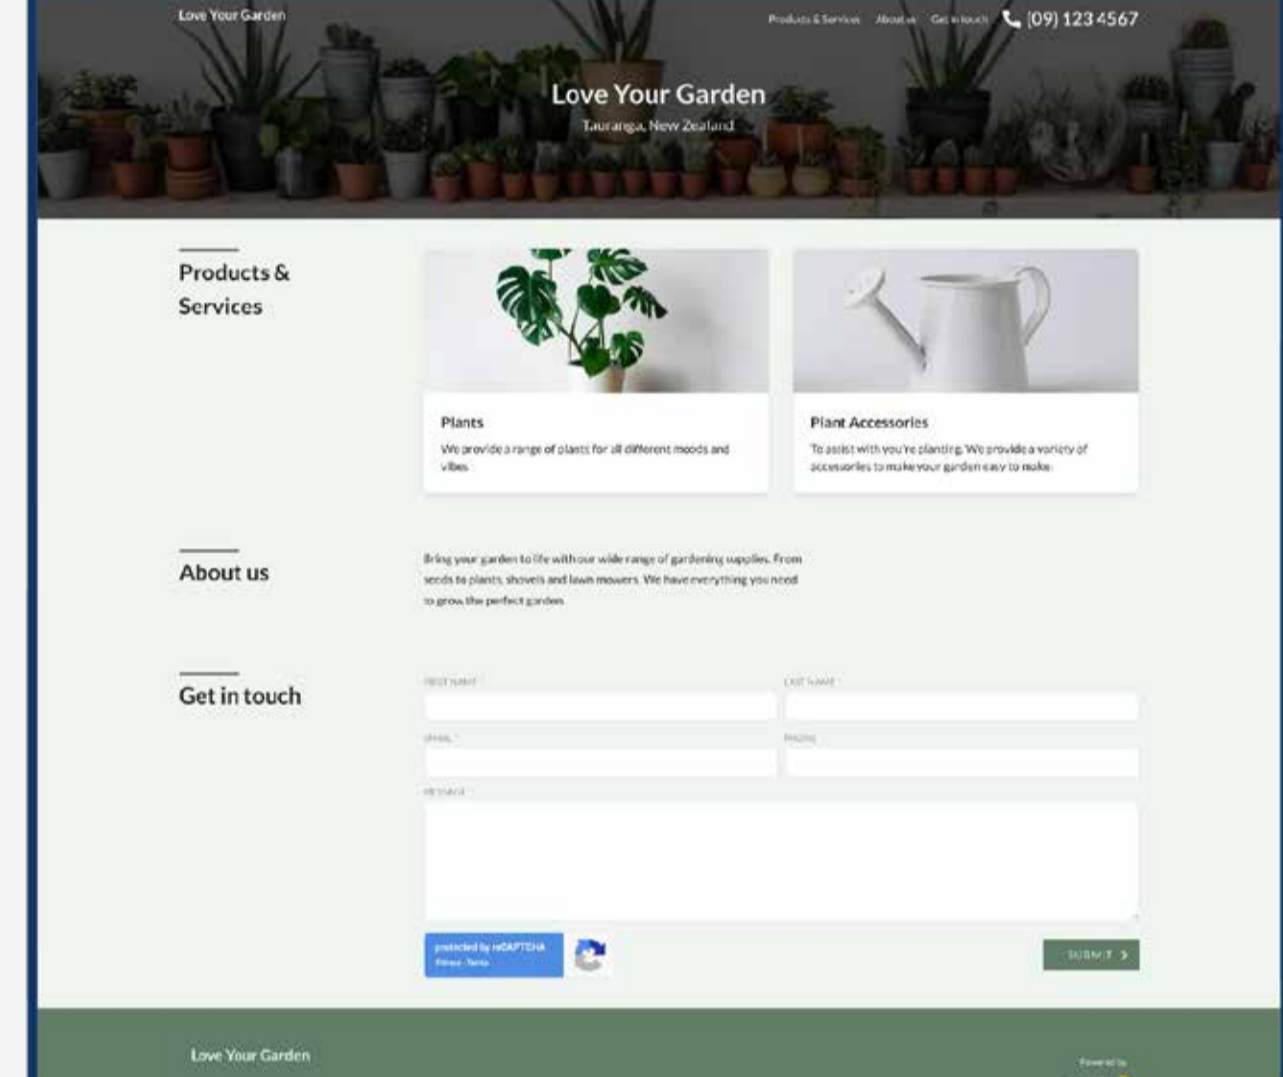

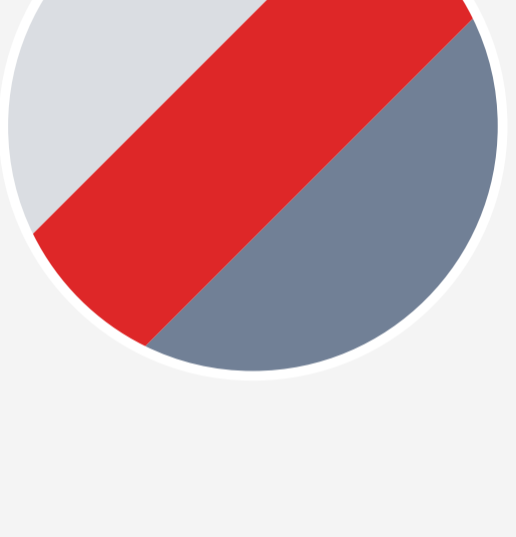

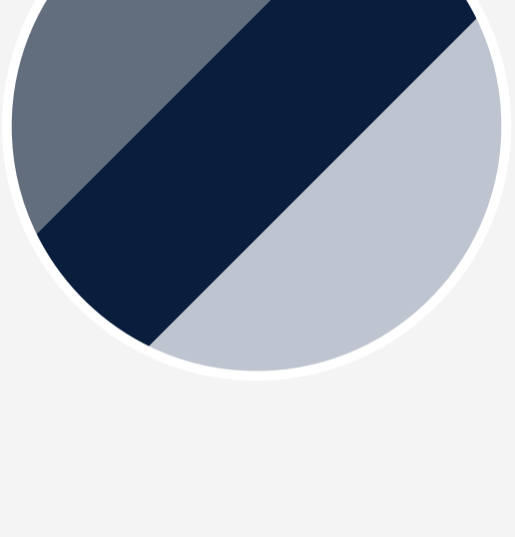

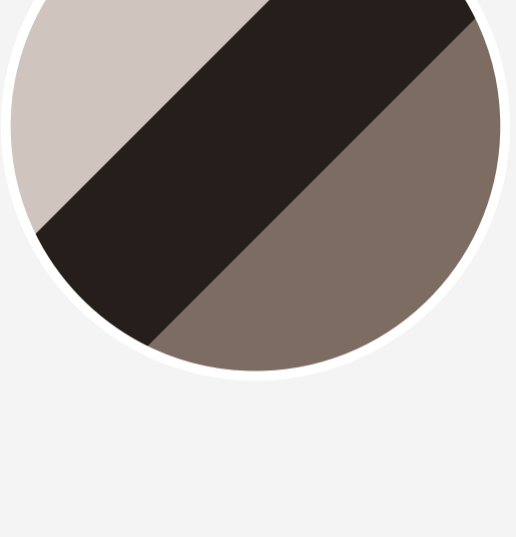

6

This section is a great place to display all the **products and services** you offer.

It also helps enhance your SEO, so don't hold back.

7

We have five fantastic **colour themes** for you to pick from! Select from the options above and you will be able to preview the theme once your website is live.

8

If you have a pre-existing/pre-purchased **website domain** please enter it here and we will be in touch to help connect it to your new website.

Otherwise, a custom domain ending in "yellow.nz" may be used for free. Please enter your preferred website name (URL) and we will check its availability for you.

## You are all done!

You can edit your info right away, but changes won't update until your website is published. In the meantime, explore your Dashboard and Management Portal, where you can see a live preview of your website!
