

ANGIOTENSIN RECEPTOR BLOCKERS

(eg: irbesartan, candesartan and telmisartan)

Medicines for high blood pressure (hypertension)

My name:

My Angiotensin Receptor Blocker medicine is called:

Active ingredient

Angiotensin Receptor Blockers:

- lower blood pressure
- help to keep the heart and kidneys healthy
- are suitable for people who are diabetic

Women need to tell their doctor if they are:

planning
a baby

pregnant

breastfeeding

as Angiotensin Receptor Blockers may not be suitable

Some medicines should NOT be taken with an Angiotensin Receptor Blocker

- **ibuprofen** (like Nurofen®) and some other medicines.

Always tell your Aboriginal Health Worker, nurse, doctor and pharmacist about **all** the medicines you are taking, even if you buy the medicine yourself at the supermarket or store.

Side-effects of Angiotensin Receptor Blockers

Angiotensin Receptor Blockers can have unwanted effects, called side-effects. Side-effects do not happen to everyone and often go away after a short time.

Mild and common side-effects:

dizziness

headaches

Serious side-effects

A **serious** and **uncommon** side-effect of Angiotensin Receptor Blockers can be:

- swelling in the face and throat and difficulty breathing

If this happens you need to call 000 for an ambulance or see a doctor straight away.

Talk to your Aboriginal Health Worker, nurse, doctor or pharmacist about side-effects.
