

SERVICES FOR CRITICAL PROCESS EQUIPMENT

Optimized solutions for aging mining infrastructure

Mineral processing and mine water treatment sites experience production shortages when equipment is operating below design capacity or nearing the end of its lifecycle. Urgent attention is needed for the system to recover quickly and continue routine operations.

WesTech subject matter experts have decades of experience and are ready to quickly assist plants in meeting discharge requirements and provide customized turnkey solutions. WesTech partners with customers to solve problems in a broad range of mining applications.

Trust those who understand your process equipment best and ensure peak performance of your production facility! Our Mining Services can help you:

- Increase production capacity
- Remove unwanted contaminants
- Meet regulatory compliance
- Achieve safety goals

Is your facility operating at peak performance? WesTech can help optimize your plant to increase production and improve minerals and water recovery.

OUR MINING SERVICES INCLUDE

Field Services

Parts and Maintenance

Equipment Optimization

Systems Upgrades

Electrical and Mechanical
Process Expertise

Turnkey Retrofits

Inspections

Service Agreements

Our expertise includes liquid-solids separation, sedimentation, filtration, dewatering, and process solutions for mine water treatment. We provide service for:

- Thickeners
- Clarifiers
- Feedwells
- Drives
- Filter presses
- Horizontal belt filters
- Membranes
- Competitors' equipment

Most of our solutions are available as mobile and temporary systems and can be rented for short-term projects.
