

PeriopSim for Orientation

- Nurses and surgical technologists are proficient more quickly by practicing clinical skills before they enter the OR
- Allocate modules to Learners and review individual progress with detailed analytics
- PeriopSim is 6x faster and can save up to 50% of clinical training time
- Educators report their Learners are more confident walking into the OR for unfamiliar procedures

Tablet, Desktop and Virtual Reality Simulations

Rehearse safely, achieve proficiency more quickly.

Experiences

Open Inguinal Hernia Repair
Laparoscopic Cholecystectomy
Burr Hole

Trauma: Bipolar Hip 1,2,3,4
Trauma: Hip Nail 1,2,3

Train and assess in as little as 30 minutes before double scrubbing or circulating.

We reduced our training time significantly for our 80 new perioperative nurses using PeriopSim. Without PeriopSim, onboarding would have taken measurably longer and my learners would have had less experience with both procedures and instruments.

Amy Boone, System Director for Perioperative Services, University Hospitals in Cleveland

I have definitely seen how much it does help. We had one nurse that used it over at our East facility. And she was able to first scrub a Laparoscopic Cholecystectomy by herself the first week they had her there because she did that Laparoscopic Cholecystectomy module multiple times. So I definitely think our management team is seeing the benefit.

Rene Browder, System OR Educator at Baptist Health

We all keep hearing about the nursing shortage, so we're obviously having to train nurses fresh out of nursing school to go through Periop101 and learn how to be an OR nurse. But it's also a competitive market because now you have so many job openings so the applicant can choose where they want to go. I found that as soon as I start talking about PeriopSim in interviews to applicants, we've got them. They're going to choose our hospital over another hospital because they're excited about the simulation aspect.

Jacqueline Phaneuf, OR Clinical Educator, Washington, USA
