

Dalain Williams

Dalian is a Technical Program Manager for Intel's Non-Volatile Memory Solutions Group (NSG). NSG works on next generation 3D NAND technology including a new class of memory – Intel Optane. In this role, he is a member of the Strategic Planning, Marketing, and Business Development team where he takes leadership in providing Product Intelligence by developing tools that are used to implement an automated system for gathering and analyzing intelligence about the performance of NSG products.

Dalian is also a co-founder of SupraBook - a platform that lets lawyers build, share, and annotate litigation binders securely in the cloud. He is truly passionate about his work and always eager to connect with other software engineers, founders, and STEM community members.

While he enjoys all aspects of his job, his favorite stage of a project is working with the client or business unit leader to understand his or her business objectives and showing that he is invested in helping them achieve their goals.
