

## Description

Talk-A-Lert® is a hardware/software package that automatically tests ETP-110 Series and ETP-500 Series Analog Call Stations and phone lines. It also serves as a base station, displaying calling location, instructions, and other information for incoming emergency phone calls.

## Features

- Operates on Microsoft Windows 10 Pro
- Dedicated computer is NOT required
- Emergency window shows exact location of incoming call plus any other critical information
- Remote operation enables many sites to be maintained from one location
- All polling and incoming call information is stored permanently
- Many detailed management reports available, including individual phone polling history incoming call summary, and more
- Automatically polls emergency phones up to once per minute (average poll time is 30 sec.)
- Poll all phones at any time by pressing one button
- Admin user may assign different authorization levels
- Incoming calls and unsuccessful polls optionally trigger alarm sound

## Requirements

Phone Lines: One (1) analog line required for polling voice modem  
One (1) analog line required for receiving incoming calls

Minimum Hardware: Windows 10 Pro, 32-bit system with 4.0 GB RAM, 20 GB storage, and two (2) serial COM ports (one for modem, second for EB-300 Base Station)

**IMPORTANT NOTE:** All programming, diagnostics, and identification of the ETP-110 Series and ETP-500 Series Analog Call Stations are accomplished through the transmitting and receiving of DTMF signals. Cellular transmissions and cellular networks may interfere with and distort these tones. As a result of these irregularities, model ETP-TAL Talk-A-Lert Polling may not function as intended and, therefore, may not be appropriate in that application or environment; ETP-TAL Talk-A-Lert Base Station will not function at all.

## Options & Accessories

Network Version: Networked workstations may be used to receive incoming calls and distribute them to different guard stations while maintaining a single database on a central server. Requires one (1) installation of Talk-A-Lert for each workstation. SQL Anywhere Studio for Windows Base Server with one (1) User (provided by Sybase or others) is also required.

Multiple Pollers: Poll with more than one phone line using multiple modems on the same computer. Each additional modem will require an additional serial port and an additional analog line.

## Example System Layout
