

COMPACT 220 AC/DC

Welding Inverter

Single-phase welding inverter designed to guarantee excellent welding qualities and be reliable and simple to use for TIG welding using direct or alternate current and for welding all commercial coated electrodes. An easy to read control panel simplifies choice between the various types of welding (STICK, TIG DC PULSATED SLOW/FAST and TIG AC) and regulation of the various current parameters, WELDING, BASIC, PEAK, pulsating times, slope up, slope down and post gas. The balancing function enables the ratio between penetration and cleaning of the weld pool to be regulated. Ideal for use in industry, on steel structural work, aluminium automation, etc.
