

Rustic Style Meets Modern Roofing Technology

In the Central Interior of British Columbia, Neville Log Homes is known for producing distinctive and rustic log homes. An architecture all its own, log homes offer a glimpse of times gone by yet incorporate some of today's most progressive building technologies.

Neville has blended rustic style with modern technology, propelling them to the forefront of the log home building industry. One of the key elements for Neville when building

homes is the roof. For their Canadian show home, they wanted a product that could withstand the harsh winters of British Columbia – with a warranty to back it up.

“The decision to use DECRA Tile was made due to the low maintenance characteristics of stone-coated steel and DECRA’s comprehensive Lifetime Limited Warranty,” stated Terry Robinson, general manager for Neville Log Homes.

Flexible, durable, and elegant, DECRA Tile is made of corrosion-resistant, aluminum-zinc alloy coated steel. DECRA Tile panels are freeze-thaw resistant, have a Class A fire rating, and the highest Class 4 hail impact resistance rating. The attractive stone-coated finish adds beauty and curb appeal.

“It is also metal, and with all the twists and turns of the houses we build, it is important to have an adaptable and quality product on the roof that can endure the harsh Canadian weather. The tile look also offers a very classy appearance that works well with the log architecture,” said Robinson.

The end result is a superior roof supported by a Lifetime Limited Warranty. DECRA Tile was the perfect fit for the Neville show home. The package of beauty and strength has really delivered for Neville Log Homes. “It turned out gorgeous and looks really nice. In fact, a lot of people come to the show home, and even though we sell log homes, they come and ask about the roof,” Robinson finished.

“It is important to have an adaptable and quality product on the roof that can endure the harsh Canadian weather.”
