

HOEM
MENTAL WELLNESS
STRATEGY

Purpose

The HOEM Mental Wellness Strategy is a framework for proactively and reactively promoting mental wellness in our students and staff. The purpose of this strategy is to enhance our students' potential for long-term success.

To help achieve this mission, this plan focuses on four main objectives:

1. Enhance mental wellness education, awareness and training for staff and students
2. Holistically build mental resiliency in students
3. Enhance support for students experiencing distress or crisis
4. Build a supportive and connected student community

Participation and Responsibility

All HOEM full-time, part-time and temporary staff members are expected to take an active role in implementing this plan by:

- Being aware of the importance of student mental wellness
- Following area-specific initiatives within this plan
- Participating in training and educational opportunities related to mental wellness

Guiding Principles

1. **We are always optimistic.** We take a positive approach to mental wellness, which assumes that students already have the capacity to thrive.

2. **Student mental wellness should be approached holistically.** There are many factors that contribute to mental wellness including physical, emotional, spiritual and cultural. Each are equal in importance.
3. **Everyone is unique.** We celebrate diversity and understand that mental wellness is not one size fits all. We work within a student-centred approach that considers each individual's needs.
4. **We will work in cooperation with student support offices at partner schools** to provide the best possible care and student experience.
5. **Students and staff will be provided the opportunity to collaborate and support each other in fostering mental wellness.** Feedback will always be considered, and we will work together to constantly improve our methods of support.

Student Mental Health

Postsecondary education brings significant change for students. Often it is the first time that individuals venture out to build a life independent from their families. This can introduce many new stressors on top of the pressure of academics. The age range of 18-25 is also when many mental illnesses are first recognized and diagnosed.

Regardless of their background, students require a healthy support network outside of academics. This plan will help support our students' academic success and long-term success throughout university and beyond.

Canadian Student Mental Health Statistics

(National College Health Assessment 2016)

- 26.3% of post-secondary students reported having been diagnosed or treated by a professional for one or more mental health conditions in the last 12 months (with anxiety and depression being the most frequent).

- 60.6% reported feeling overall more than the average level of stress during the last 12 months.
- 59.6% reported feeling at some point like things were hopeless in the last 12 months, including 24.5% in the last two weeks.
- 64.5% reported feeling overwhelming anxiety at some point in the last 12 months, including 28.5% in the last two weeks.
- 44.4% reported feeling so depressed it was difficult to function at some point on the last 12 months, including 17,1% in the last two weeks.
- 13% reported having seriously considered suicide at some point in the last 12 weeks, including 3% in the last two weeks.

Current Initiatives

O1: Enhance mental wellness education, awareness and training for staff and students

- Three annual safeTALK training sessions on suicide prevention hosted for HOEM students. To encourage attendance, these training sessions are free of charge. Trainings are held:
 - October
 - January
 - March
- safeTALK training is mandatory for all HOEM staff including student staff, temporary staff and subcontracted staff. All current staff that have not been trained must be retroactively trained.
- Educational awareness campaigns. Topics will line up with the academic year:
 - September – October: time management and basic skills for success
 - November – December: stress relief, mindfulness and relaxation techniques
 - January – February: maintaining motivation and beating the winter blues
 - March – April: long-term strategies to stay positive and reframe the negative

- Partnerships with student services to enhance awareness for on-campus offerings.
- Wellness resource page on website:
 - University resources
 - External community resources
 - Quick mental health tips and tools
 - Mental health policy

O2: Holistically build mental resiliency in students

- Partnership with Inkblot to provide 2 free virtual counselling sessions to every student and free mental health awareness training. Subsequent counselling sessions can be submitted through student benefits.
- Quarterly workshops with professional wellness and performance coaches in line with quarterly educational and awareness campaigns
- Monthly volunteer opportunities
- Stress relief events and workshops during key times throughout the academic year
- Daily fitness classes and monthly specialty fitness classes
- Monthly cooking and nutrition workshops
- Monthly HOEM Schooled workshops teaching important life skills
- Partnerships with academic links to provide support within programs & faculties

O3: Enhance support for students experiencing distress or crisis

All student inquiries regarding distress or crisis are to be responded to by a staff member who is trained in ASIST or another form of crisis intervention.

HOEM is to ensure that we have up-to-date emergency contact information for all residents.

Students experiencing distress or crisis should be treated according to a standard set of guidelines, which is shared with HOEM office staff.

O4: Build a supportive and connected student community

- Provide structured opportunities for social connection. Specific focus placed on orientation month to help students build relationships early in the school year.
- Oversee the formation of clubs in order to connect like-minded students
- Celebrate students and involve them in building the HOEM Community:
 - Student success newsletter features
 - Student artwork and schoolwork displays
 - Personalized birthday messages
- Roommate matching program
- Partnerships with on-campus student groups
- Programming focused on connecting international students at the beginning of the year
- Peer support program led by Inkblot (coming soon!). This will allow students who are trained in active listening and referral to facilitate support for other students.

- Student mental wellness committee consisting of HOEM staff members and students. Meetings occur monthly to discuss student wellness throughout the building and to develop new initiatives for supporting student mental wellness.

HOEM will not take an active role in promoting any corporate mental health initiatives (e.g. Bell Let's Talk). If students or Residence Advisors are interested in supporting a specific corporate mental health initiative, they must have any promotional materials approved by HOEM management. Initiatives will be approved on a case by case basis.
