VALTIX
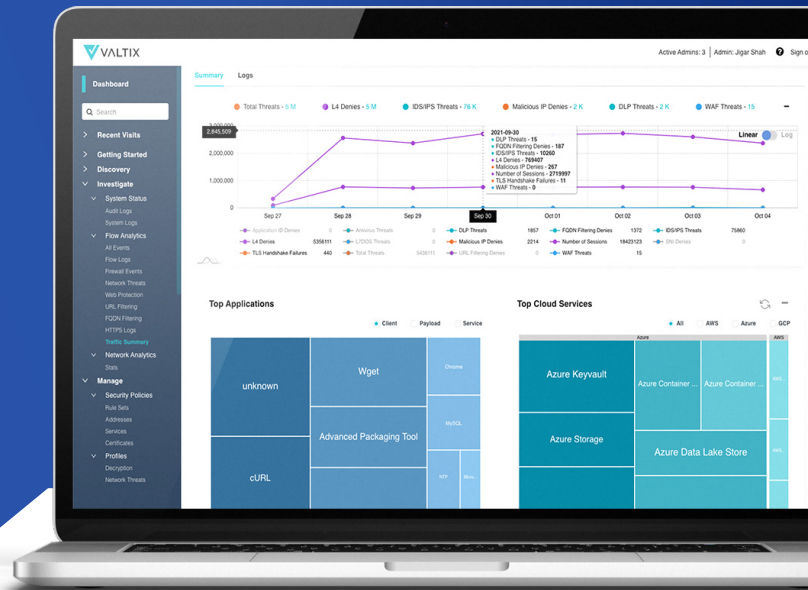

The Valtix Platform
MULTICLOUD SECURITY IN 5 MINUTES

Cloud Security Must Align With Dynamic Needs

Across every industry, organizations are now taking a "cloud-first" approach to drive greater business agility and competitive business advantage. But as they make the move, the number one challenge is how to achieve these benefits whilst maintaining consistent security across cloud workloads, accounts, and providers.

Cloud-first architecture starts with a blank sheet of paper to build for the next decade, not the last. But legacy on-prem tools simply aren't fit-for-purpose in this new era— and cloud-first organizations know it.

They realize that security in the cloud must be architected around a more dynamic environment. And they know that failing to do so will result in security gaps that lead to costly remediations and business-impacting security breaches.

Security technology must move with the same agility as the cloud app workloads it supports.

Valtix was built on the cloud, for security of the cloud, to solve this strategic need.

The Valtix Difference

Valtix is the first and only multi-cloud network security platform delivered as a service. With Valtix, cloud teams meet the most stringent security & compliance requirements in a more cloud-first and dynamic way.

Robust Security, Cloud-first Simplicity: Achieve robust cloud security through advanced network-based security controls built for agility.

One Policy, Many Clouds: Consolidate network security management in one console, through a single dynamic policy framework across workload types, accounts, virtual networks, and cloud providers.

Continuous Visibility: Enables security through continuous insight into apps and infrastructure.

On-demand Scale: Adapt continuously to changes and new assets, and scale with cloud automation through infrastructure as code (IAC).

End-to-end Platform: Eliminate the need for point solutions by consolidating on a single platform for cloud network security.

VALTIX NUMBERS THAT MATTER

5-Minutes to Deploy
Cloud-first simplicity to deploy security and policy across clouds or accounts

100% Cloud Coverage
Connects discovery to defense so that every account, app & API is secured

Zero Agents
No agents or infrastructure to maintain means fewer outages and lower costs

30-Seconds to Adapt
Adapts dynamically to new apps and changes to existing apps

10X Productivity
No maintenance of security infrastructure with built-in availability and scale

One Policy Framework
Gain consistent security across AWS, Azure, GCP, and Oracle (OCI)
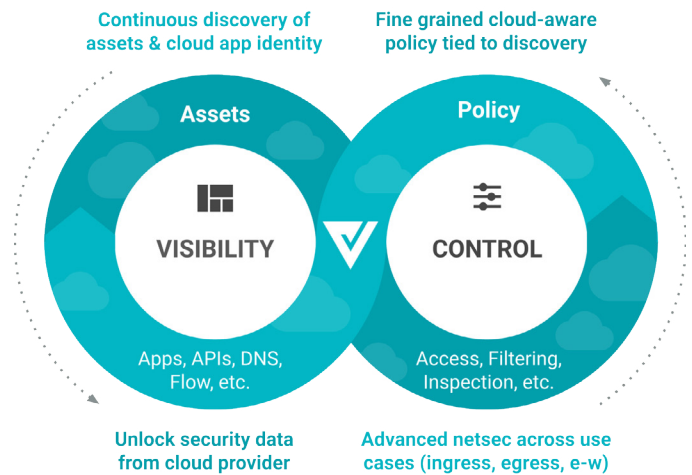

VALTIX

THE VALTIX MULTICLOUD SECURITY PLATFORM
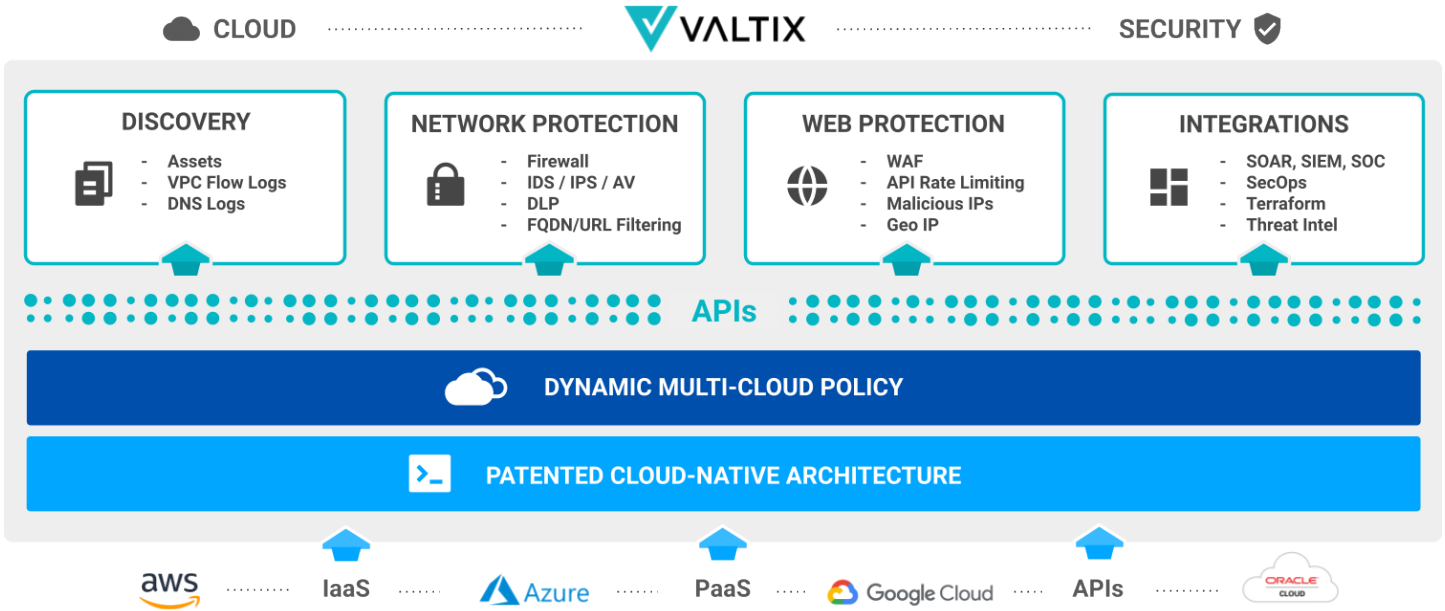

Meet Valtix Dynamic Multi-Cloud Policy™

Clouds Are Dynamic. Security Policy Must Be Too.

According to Gartner, by 2025, 99% of cloud security failures will be within the customer's control. When it comes to cloud network security, failures happen when policy is fragmented across accounts or clouds. They also happen when policy is tied to IP addresses that inevitably change. Cloud teams need a cloud-native model of tag-based policy that works multi-cloud.

Only Valtix Delivers Dynamic Security Policy

- Connects continuous visibility and control to discover new cloud assets and changes, associate tag-based business context, and automatically apply the appropriate policy to ensure security across dev, test, production, and compliance workloads.

- Powers Valtix security gateways so they

- just work in the background, invisible to cloud teams.

- Ensures that critical security gaps don't emerge and that the business stays secure and resilient.

Valtix Cloud Security & Compliance Benefits:

Advanced security to minimize the attack surface, stop malicious actions, and block exfiltration.

Block Data Exfiltration (Egress) Apply granular control of egress traffic to facilitate app and machine-initiated connections. Set DLP policies to alert or block on sensitive data.	**Automate With Infrastructure as Code (IaC)** Full support for infrastructure as code (IaC) through Terraform for automated deployment and the application of policy.
Discover Cloud Assets Teams benefit from an updated source of truth about key applications and assets across multiple cloud accounts and virtual networks.	**Enable Detection & Response** Forward network logs or security events to centralized data stores for analysis, correlation, and investigation
Gain Threat Insight with DNS and VPC Flow Unlock these critical log sources and correlate with threat intelligence to alert on potentially malicious activity across all your instances and VPCs.	**Meet Compliance Mandates** Meet critical compliance requirements for network segmentation and the handling of sensitive personal or financial data.
Mitigate Zero Day Vulnerabilities Apply policy to restrict access to resources, thus reducing the attack surface. Block specific attacks via integrated threat intelligence.	**Prevent Lateral Movement** Leverage a full stack of security that can help provide visibility and control to lateral movement through east-west traffic within public clouds.
Protect Platform Services (PaaS) Gain visibility & control of the 10s & 100s of Cloud Services from AWS, Azure & GCP.	**Secure Web Apps & APIs** Integrated Web Application Firewall (WAF) to secure your web applications and APIs against external threats, including OWASP Top 10

About Us

Valtix is on a mission to enable organizations with security at the speed of the cloud. Deployable in just 5 minutes, Valtix was built to combine robust multi-cloud security with cloud-first simplicity and on-demand scale. Powered by a cloud-native architecture, Valtix provides an innovative approach to cloud security called Dynamic Multi-Cloud Policy™, which links continuous visibility with advanced control. The result: security that is more effective, adaptable to change, and aligned to cloud agility requirements. With Valtix, organizations don't have to compromise in the cloud. They can meet critical security and compliance requirements without inhibiting the speed of the business. Valtix has been recognized as an innovator in numerous industry awards including 2021 top honors in the "Next-Gen in Cloud Security" from Cyber Defense Magazine, SINET-16 Innovator recognition, and inclusion in Gartner's Cool Vendors in Cloud Networking report.
