

## How to get started?

### In Phrase

- Get invited to your organization's Phrase account.

- Install the Sketch or Figma Plugin

- Insert your Phrase Login Details

Login

## Best Practices for working with Phrase

### Pushing content to Phrase

Agree on a key naming convention with your developers and make sure each text field has the right key name.

Click: Push content to Phrase.

Select which project your content should be pushed to.

### Working in Sketch

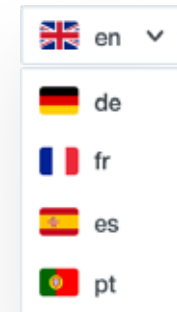

Attach screenshots and define character limits for your translators.

Pull translations back into Sketch and switch between languages with the help of a language dropdown menu.

Easily export your designs in all languages to user testing tools or for the App Store / Google Play.

Combine using the Phrase Plugin with using the Anima Plugin. Get your UI optimized for all languages in just a few clicks.

If you only need a first draft and not the final translations yet, use Autofill. It provides automatic translations in a matter of seconds.

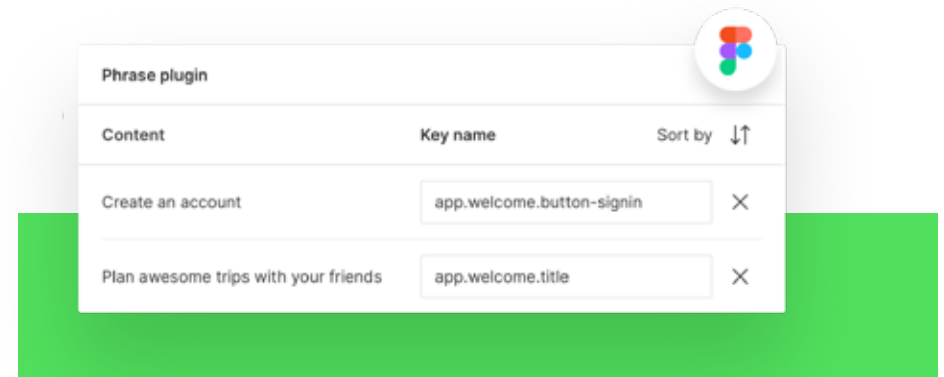

### Working in Figma

Screenshots can be automatically attached to give translators proper context.

Create translation jobs directly from within Figma.
