

Installing the Phrase Client

Learn how to install the Phrase Client on macOS, Windows and Linux.

macOS

Install using Homebrew

1. Tap our Formula repository:

```
$ brew tap phrase/brewed
```

2. Install the PhraseApp Client using **brew**:

```
$ brew install phraseapp
```

The Formula will be updated whenever you run **brew update**.

Download and install manually

1. [Download the latest release](#) of the Phrase Client for macOS.

2. Place the executable in your path, or place it elsewhere and create a symbolic link to it in your path (see [PATH](#)).

3. Set the executable flag to make the binary executable, if necessary:

```
$ cd /path/to/phraseapp && chmod +x phraseapp
```

4. You can now run the Phrase Client:

```
$ phraseapp
```

Or, if the Phrase Client is not in your path:

```
$ /path/to/phraseapp/phraseapp
```

Windows

1. [Download the latest release](#) of the Phrase Client for Windows. We recommend using the installer, which is named `phraseapp_windows_setup.exe`.
2. Run the installer.
3. You can now run the Phrase Client from a command prompt by typing `phraseapp`.

Linux

1. [Download the latest release](#) of the Phrase Client for Linux.
2. Place the executable in your path, or place it elsewhere and create a symbolic link to it in your path (see [PATH](#)).
3. Set the executable flag to make the binary executable, if necessary:

```
$ cd /path/to/phraseapp && chmod +x phraseapp
```

4. You can now run the Phrase Client:

```
$ phraseapp
```

Or, if the Phrase Client is not in your path:

```
$ /path/to/phraseapp/phraseapp
```

Building the client from source

Users of other platforms that have a [Go](#) port can build our client [from source](#).

Note: If you're using Android Studio or Visual Studio, check out our [IDE plugins](#) for syncing locale files between your repository and Phrase.
