FELIX

The world's most connected and versatile nurse call solution

- Enterprise-grade scalable solution for hospitals & aged care
- Voice activation neural network call points (AI)
- Wired (IP PoE), wireless (IoT) and hybrid infrastructure
- Call point connectivity — IoT (LoRa), NFC, Bluetooth, Zigbee
- RTLS (Real-Time Location Systems) and device localisation
- Dementia activity supervision and alarms
- Cloud maintenance and remote software upgrades
- Reporting infographics and predictive analytics
- Open API platform integration
- Australian designed and produced
- 5-year factory warranty
- AS3811 compliant

Vitalcare

ISO 9001 QUALITY

FELIX

About

Felix is a highly versatile and scalable hybrid IP nurse call system that supports an unlimited number of both wired and wireless devices.

The ecosystem features localised neural networks for voice and sound-activated call points with multiple connectivity options including IoT (LoRa), Bluetooth, Zigbee and NFC (Near Field Communication).

"Felix would have to be the most advanced and versatile nurse call system I have ever seen. The combination of a distributed infrastructure and both wired and wireless functionality provides the ultimate in versatility and reliability."

— Aged Care CTO

Felix Features

Versatile
With its high processing power and wide range of connectivity options, Felix can run a major hospital, aged care facility or small health practice. From simple nurse call functions to complex dementia management, RTLS and workflow integration, Felix is the most versatile platform available.

Future Proof
New features can be added remotely to the Felix ecosystem extending both functionality and system longevity, improving return on investment.

Voice Calling
Voice call points support keyword activation using secure localised neural networks. In addition to keywords, the network can be trained to listen for unexpected sounds or symptoms, such as coughing.

Connectivity
Felix supports a host of connectivity options including IoT (LoRa), Bluetooth, WiFi, NFC (Near Field Communication) and CAN bus. Open API's provide advanced integration to corporate information systems.

Workflow Improvement
Facility efficiencies are realised through effective call priority routing, workflow integration and contact options, such as immediate nurse to bedhead voice connectivity.

Reporting
Felix provides a comprehensive enterprise level multi-facility cloud-based reporting engine for benchmarking and system maintenance. This includes infographic dashboards and scheduled performance reporting.
