

# #WATERATWORK

We have a **once-in-a-generation** opportunity to reinvest in more just and **equitable water systems** that build resilient communities and create family-wage jobs.

**Replacing all lead water pipes** to homes and schools creates work for construction workers, pipefitters, and plumbers while protecting public health.

**Protecting watersheds creates jobs too.** For every dollar spent restoring forests and floodplains, \$2.50 is generated in economic activity.

**Swapping pavement for plants** at homes and parks cools neighborhoods and protects us from flooding and pollution.

A “silver tsunami” of water workers hitting retirement age soon means **we need to invest in training and recruitment** that make family-wage water jobs accessible.

**Investing in smart irrigation** prepares us for drought, protects the future of farming, and creates new business for suppliers and installers.
