### Who's it for?

- ✓ Investment Managers
- ✓ Brokers
- ✓ High Net Worth

### Why Stake with Trustology?

- ✓ Reduced security and technical risks
- ✓ User-friendly interface for easy, efficient access to ETH 2 Network
- ✓ Secure access to DeFi for maximised gains
- ✓ Insurance protection for your assets
- ✓ Award-winning technology provider

## You Invest. We handle the rest.

Staking ETH could yield you up to 7% interest after costs and delivers a lower inflation rate - 0.10% to 0.45%. Lower inflation means more capital assets in your wallet. It's a clear opportunity for safe gains as long as you've got a custodian, staking system, and code validator you can trust. With Trustology as your partner, you get a fully automated solution that eases the technology burden and difficulty of staking ETH.

# The Difference.

Investing in crypto is complex and processes are always evolving. Staking with Trustology is clean, safe, and hassle-free. Here's why:

## SAFER

### Reduced security risks

Withdrawal keys to funds are securely locked-up in Trustology's enterprise-grade end-to-end hardware secure custodial wallet TrustVault. Our staking partners securely hold the validator keys in their hardware and software security infrastructures.

### Market leading insurance

TrustVault is insured by Marsh for financial crime so you can rest assured your assets are protected.

### Security controls

Multisig, account permissioning, allow and deny lists to keep your assets safe.

## FASTER

### Lightning fast

TrustVault processes transactions in seconds thanks to its resilient and scalable technology and architecture.

### Always available

Our TrustVault custodial wallet provides a user-friendly front-end that's easily accessible on mobile, desktop or via API, 24/7.

### Decentralised gateway to get ahead

Access shared liquidity pools, borrowing and lending protocols, innovative derivatives, and decentralized peer-to-peer token exchanges through our MetaMask and WalletConnect integrations. Enjoy maximised gains, minimised risks.

## EASIER

### Hassle-free and user-friendly

We enable clients to securely stake their own ETH or their customers' ETH from directly within the TrustVault wallet to the staking and validator infrastructure through a user-friendly interface.

### Fully auditable

A custodial wallet infrastructure that gives you segregated accounts across wallet and sub-wallet arrangements to manage an infinite number of private keys that you can easily audit anytime, anywhere.

### Save on time and costs

With Trustology's APIs and partnerships with a number of reputable staking service providers, you reap the rewards of staking without incurring the time and costs involved to run your own infrastructure and service.

# The Details.

Ready to stake? Here's how it works.

## STEP 1

### Stake

Easy to follow steps to stake within the wallet. 32 ETH is the minimum stake required. Similar to a CD, this initial transfer is irreversible until the lock-up period has ended.

## STEP 2

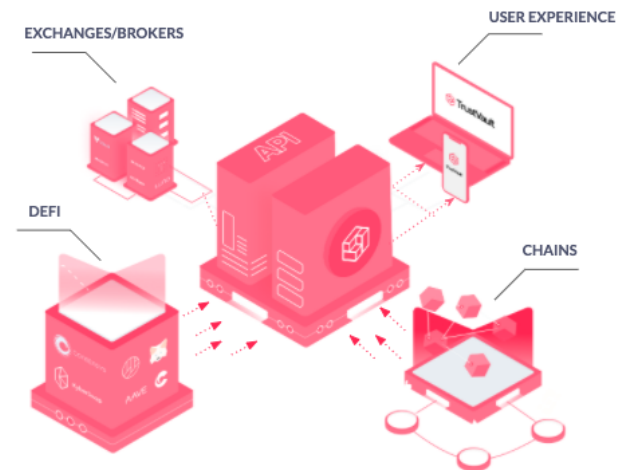

### Validate

Our staking partners provide the staking and validator infrastructure and safeguard validator keys in their bank-grade security infrastructure with zero access or control of your funds.

Meet our ETH2 staking partners:

## TrustVault Platform Ecosystem

## STEP 3

### Withdraw

Opt-in or out of staking at any time. Your withdrawal keys to funds are securely held by Trustology and always accessible.

Withdraw your funds once the lock up period has ended, access is immediate and retrieving is pain-free.

“

ETH2.0 brings to the forefront the need for bank-grade secure, but lightning-fast, custody solutions.
