Trustology and MoonPay team up to enable TrustVault users to top up their cryptocurrencies in minutes

29 October, 2019, London: [Trustology](#), a UK based FinTech company focused on providing high-end, insured custodial wallet solutions to secure and manage cryptoassets, today announced it has integrated [MoonPay](#) into its TrustVault custodial wallet platform. The move enables users to quickly buy cryptocurrencies by simply connecting their TrustVault app with the fiat-to-crypto payments platform MoonPay to purchase cryptocurrencies.

With MoonPay's seamless on-ramp for fiat currency, users can now go into their TrustVault app and instantly buy BTC, ETH, DAI and BAT using ApplePay or their debit and credit cards. The process only takes a few moments and the assets arrive within minutes into their TrustVault account. "At MoonPay we believe a user-friendly onboarding experience is essential to make cryptocurrencies accessible to everyone. We're thrilled to partner with Trustology to help users top-up their TrustVault accounts instantly," said Ivan Soto-Wright, co-founder and CEO of MoonPay.

Commenting on the integration, Alex Batlin, CEO of Trustology said: "We think that harnessing the benefits of MoonPay takes us one step closer to becoming a one-stop solution for cryptoassets. To use cryptoassets, you need a wallet that's super secure, easy to use and very fast, and we've built exactly that with [TrustVault](#). So, we have a custodial wallet platform with an adaptable end-user experience. Ultimately, we want people to think of Trustology as the gateway to crypto-assets and applications, or put another way, a distribution channel for future financial services. After all, in the same way that the internet did not reach mass adoption until folks had access to great browsers, and banks were needed to channel financial services, so now we need amazing wallets to drive next-generation decentralised finance on the internet."

TrustVault offers customers a user-friendly interface, the highest level of cryptoasset security available today and excellent performance. The technology uses a combination of programmable hardware security modules in ultra-secure data centres with multiple-encrypted backups that make for a sophisticated key management system that is machine-driven and eliminates the possibility of risk by human error. Users also benefit

from the convenience of 24/7 access to their wallet accounts from their mobile phone, as well as insurance, rapid account recovery and customer support.

About Trustology:

Trustology was created to enable the adoption of cryptoassets on a global scale by building high-end solutions to address the very real concerns that stand in the way of widespread blockchain adoption, now and in the future.

That's why we built TrustVault – a fast, user-friendly and highly secure custodial wallet service designed to address the security and ownership shortcomings of existing custody solutions, hardware wallets and cold storage options today, whilst also providing the same level of speed, flexibility and access we've come to expect from traditional assets and account services.

With the support of ConSensys and Two Sigma Ventures and our team of highly-experienced blockchain, banking and software experts, we are hard at work defining the way that cryptoassets will be secured and managed in the digital era. Utilising well-designed processes and superior technology, we're about delivering market solutions that are smart and of the highest quality.
