

A HEALTHY WEIGHT STARTS WITH HEALTHY HABITS

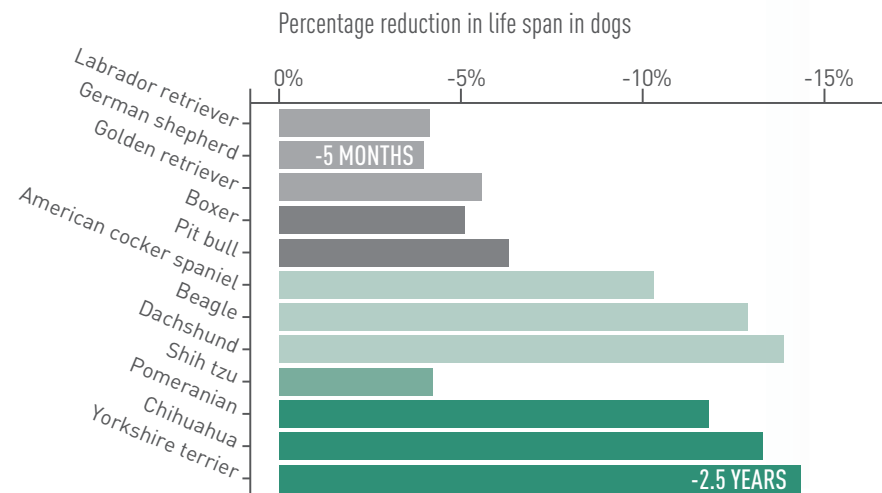

PET OBESITY HAS HIDDEN COSTS THAT OWNERS MAY NOT BE AWARE OF

REDUCED LIFE SPAN

STUDIES REVEAL THAT CATS AND DOGS WITH EXCESS WEIGHT MAY LIVE SHORTER LIVES^{1,2}

OVERWEIGHT DOGS MAY LIVE UP TO **2.5 YEARS** LESS THAN THOSE OF AN IDEAL WEIGHT¹

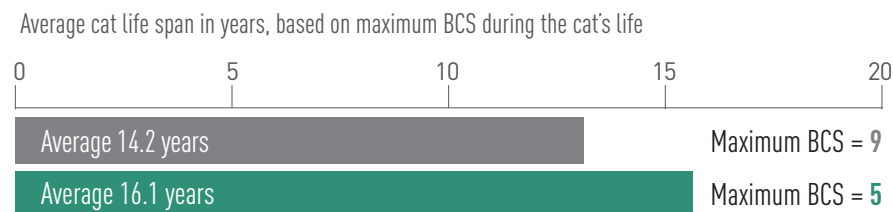

Retrospective study of 57,787 neutered dogs, age 5.5 to 9.5 years, 12 common breeds.

MARKEDLY OBESE CATS MAY HAVE THEIR LIFE SPAN SHORTENED BY AN AVERAGE OF **1.9 YEARS** COMPARED TO CATS IN NORMAL BODY CONDITION

REDUCED LONG-TERM HEALTH

OBESITY IS A GATEWAY TO ASSOCIATED DISEASES AND CONDITIONS³⁻⁵

A LIFETIME OF EXTRA EXPENSE

OWNERS OF OBESE PETS SPENT MORE ON AVERAGE THAN OWNERS OF HEALTHY WEIGHT PETS⁶

Dog owners spent

- + 17% more on healthcare costs
- + 25% more on medications

Cat owners spent

- + 36% more on diagnostic procedures
- + 53% more on surgical services

Data from cats and dogs monitored over a 4-year period.

IT IS VITAL THAT OWNERS ARE AWARE OF THESE HIDDEN COSTS AND **GET SUPPORT** FOR MANAGING THEIR PET'S **WEIGHT AND HEALTH FOR LIFE**

97% SUCCESS RATE FOR WEIGHT LOSS^{7,8,9*}

STARTS WITH A CONVERSATION ABOUT BEGGING BEHAVIOR

Overweight pets are common, but the conversation about weight is not an easy one.

For veterinarians...

- Owners may not think their pet is overweight¹⁰
- Client compliance is difficult to achieve

...and for pet owners

- Concern that a weight loss program may cause increased hunger for their pet⁷
- Concern that a weight loss program will impact the relationship they have with their pet¹¹

► **Talk openly to your clients** about the impact of begging and obesity to help them manage their pet's health.

4 STEPS TO A SUCCESSFUL WEIGHT CONVERSATION

1 EXPLORE

HELP OWNERS UNDERSTAND THEIR PET'S BODY CONDITION

- Encourage the owner to **see and feel** their pet's body condition
- Explain what a body condition score is and what the score means

2 CONNECT

FIND COMMON GROUND AROUND BEGGING AND TREATING HABITS

- Ask if the owner notices **begging behavior**
- Acknowledge that begging is common and a **challenge**
- Ask if the owner is aware of **why pets beg**, beyond food or treats
- Encourage the owner to **adopt a new reward** strategy to keep the bond, such as playing, petting, grooming and exercise

3 EDUCATE

OUTLINE THE BENEFITS OF A HEALTHY WEIGHT

- Explain to the owner how maintaining a healthy weight can help improve the pet's **quality of life**
- Explain that **activity levels** may improve after just 2 weeks^{7,9}

4 SUPPORT

RECOMMEND A COMPREHENSIVE APPROACH TO HEALTHY LIFESTYLE AND FEEDING

- Encourage regular **exercise and play** activities
- Stress the importance of **regular follow-up appointments**
- **Make an individual nutrition recommendation** with the ROYAL CANIN® SATIETY™ SUPPORT product line

* On completion of 3-month weight loss program

MOBILITY MANAGEMENT GET A HEAD START.

ROYAL CANIN ADVANCED MOBILITY diets, an essential ally for optimizing daily management of pet mobility

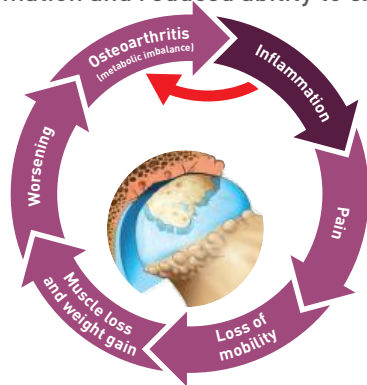

OSTEOARTHRITIS IS A COMMON CONDITION

NUTRITION CAN SUPPORT JOINT HEALTH

A PAINFUL SITUATION

Osteoarthritis is characterized by a "vicious cycle" of **reduced mobility, increased pain and inflammation and reduced ability to exercise.**

Predisposing factors:

Trauma, dysplasia, overweight, age

CONDITIONS SUCH AS DECLINING MOBILITY BECOME COMMON AS DOGS MATURE.

Up to
80%

of dogs over 8 years old are thought to **suffer from osteoarthritis**¹

Up to
52%

of dogs suffering from **osteoarthritis** are also **overweight or obese**²

It can be difficult to detect declining mobility in some dogs, but it also varies from pet to pet and with respect to their relationship with the pet owner.

WHY IS NUTRITIONAL MANAGEMENT IMPORTANT?

GOAL OF DIETARY MANAGEMENT, THE ROYAL CANIN® APPROACH

FIGHT AGAINST INFLAMMATION AND MAINTAIN JOINT INTEGRITY

- Fish oils are rich sources of EPA and DHA, long chain omega-3 fatty acids that are well known for their anti-inflammatory properties.^{3,4}
- Turmeric extract, hydrolyzed collagen and green tea extract support joint health.
- Antioxidants help maintain a healthy immune system and help reduce DNA damage associated with cell aging.

THE ROYAL CANIN NUTRITIONAL SOLUTION

ADVANCED MOBILITY SUPPORT

Royal Canin Advanced Mobility Support diets are supplemented with long-chain omega-3 fatty acids, a blend of antioxidants, and a cocktail of turmeric extract, hydrolyzed collagen and green tea extract to support joint health and help maintain a healthy immune system.
