How Contact Tracing for COVID-19 Works

If you are a **primary contact** of any COVID positive persons, you will be contacted by Public Health through their contact tracing.

If you are a **secondary contact**, you will only be contacted if your contact with the primary contact tests positive.

Tertiary Contact ▼

Tertiary Contact is someone who has had **NO** direct contact with the COVID-19 positive person nor a primary contact, but has had contact with a secondary contact.

COVID-19 Positive

Primary Contact ▼

Primary Contact is having the following contact with a COVID-19 positive person:
- face to face contact within six feet of each other for 15 minutes or more *(in a single day)*
- direct contact *(ie: kissing, hugging, shaking hands)*
- living in the same household

Secondary Contact ▼

Secondary Contact is someone who has had **NO** direct contact with the COVID-19 positive person, but has had contact with their primary contact.
