

Ransomware is Monstrous.

There is a new variant of ransomware more monstrous than the original. It copies your data from your network to theirs so, even if you restore your data from backups, you still have to pay a ransom to keep your client data from being publicly published.

What would happen if your confidential information became public? Could you survive a breach? What would your customers say? What would your competitors do?

Bad actors are opportunists looking for companies with their defenses down. There's been a significant uptick in Cyber-attacks since the COVID-19 pandemic. Now more than ever, your company needs the best protection available.

Yeti Repel is next-generation protection that combines artificial intelligence with humans behind the scene 24/7. If the system detects a problem, it quickly raises the alert. If the threat tries spreading across your network Yeti Repel isolates the problem computer on your network. The swiftness of action prevents further harm to your systems, protecting you from the bad guys getting a foothold to copy your data.

MySherpa also has a one-touch rollback feature, getting you back to work quickly with any affected files.

Getting worry-free IT for less than you think is an easy three-step process.

First, schedule a discovery meeting zoom with Sherpa Greg. In the meeting, we will discuss what will make your IT worry-free.

[SCHEDULE NOW](#)

Second, we will schedule a site assessment which will help us plot a path towards your worry-free goals.

Third, we will review best practices and custom recommendations/options so you can choose the best path forward.
