#### Validated Integration

##### PeopleSoft

Oracle Validated Integration provides customers with confidence that a partner's integration with an Oracle on-premises application is functionally sound and performs as designed. This can help customers reduce deployment risk, lower total cost of ownership, and improve the user experience related to the partner's integrated offering.

#### Save time, reduce costs, and minimize risk with FasTest Test Automation Tools.

The FasTest test automation solution is built to integrate with the PeopleSoft Test Framework to enhance and extend the capabilities of the tool. FasTest includes test automation tools, test management tools, defect management tools, and test reporting capabilities.

#### Company Overview

Astute Business Solutions is dedicated to simplifying and maximizing returns on investment in enterprise business applications for companies of all sizes and from all industries. Its mission is to help clients transform their businesses through innovative, practical, and cost-effective methods with Oracle enterprise business applications—both on premises and in the cloud.

#### Integration Overview

By presenting an online interface for test automation, FasTest simplifies a functional user or business analyst's experience with automated testing by enabling access from within the PeopleSoft environment. It also provides analytics to a test manager or a test lead to track and monitor the progress of automated testing; these results can be viewed in the PeopleSoft dashboard. The integrated defect tracking capability ensures that test logs and test defects are closely coupled together to enable faster resolution of identified issues within the PeopleSoft deployment.

#### Integration Details

The FasTest test automation solution is built for four pillars:

- **Automation capability.** Build and edit new test cases and business process tests; execute and schedule test cycles; track and monitor test logs.
- **Defect management.** Create new defects for failed test scenarios; track the defects through their lifecycles; send email notifications and generate defect reports by assignee, module, or test cycle.
- **Test management.** Manage and track test execution by user, date, or module; organize a test library in the underlying PeopleSoft Test Framework library; manage upcoming test cycles.
- **Test reporting.** Get up-to-date, live test reports on the testing dashboard; analyze test coverage across modules; identify testing lags during a test run; review defects by module, assignee, or age.
