# Documoto Authoring Essentials
Upgrade your parts catalog capabilities!

Do you struggle to keep print or PDF-based parts books up to date, and delivered on time alongside your product delivery?

Documoto's Authoring Suite is a powerful solution that allows manufacturers to create content such as parts, assembly pages, and full parts books, all within an easy-to-use interface. Documoto's database architecture leads to significant time savings in formatting and publishing catalogs; and when part info is revised in the database it is instantly pushed to every relevant parts book. Formatting effort is reduced with templates and print-to-PDF features, such as: automated table of content generation and page numbering, improving accuracy, and allowing publications staff to work on tasks that enrich content.

Advantages to Your Technical Publications Team

- Support your global channel and customers by authoring the same information in multiple languages.
- Make it easier for your channel and customers to find exactly what they need with our advanced tagging and metadata capabilities.
- Add context by relating content together and by adding other content such as videos, owner's manuals, specifications, etc.

- Ease the burden of updating content through capabilities such as global supersession and content reuse.
- Automate the conversion of data and images to XML format, enabling content re-use in multiple catalogs, whether you need digital or print.
- Advanced print layouts to make your printed catalogs reflect your exact brand and style, using the same exact content.
