DASERA
Operationalize Your Data Governance
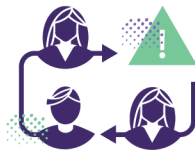

Dasera operationalizes security and compliance policies across the data lifecycle.

Convert data governance policies to automated workflows

Reduce risk by contextualizing infra, data & users

Improve efficiency and cross-functional **collaboration**

Grant broader access while reducing risky data usage

What Keeps Data Governance Teams Up at Night

Data Governance is hard and largely manual. Preventing data sprawl, data leakage, privacy violations, over-permissioning, and data misuse inherently requires seamless cross-functional context and collaboration. Infrequent data governance audits generate an incredible amount of manual work across multiple teams without addressing the underlying operational gaps. Between the audits, real-time visibility remains non-existent and data governance is left to chance.

Check continuously for real-time audit info.

Work with products & teams that don't talk to each other.

Update policies from paper to code.

Track down data sprawl & leakage.

Identify & secure sensitive data.

Detect data misuse & privacy violations.
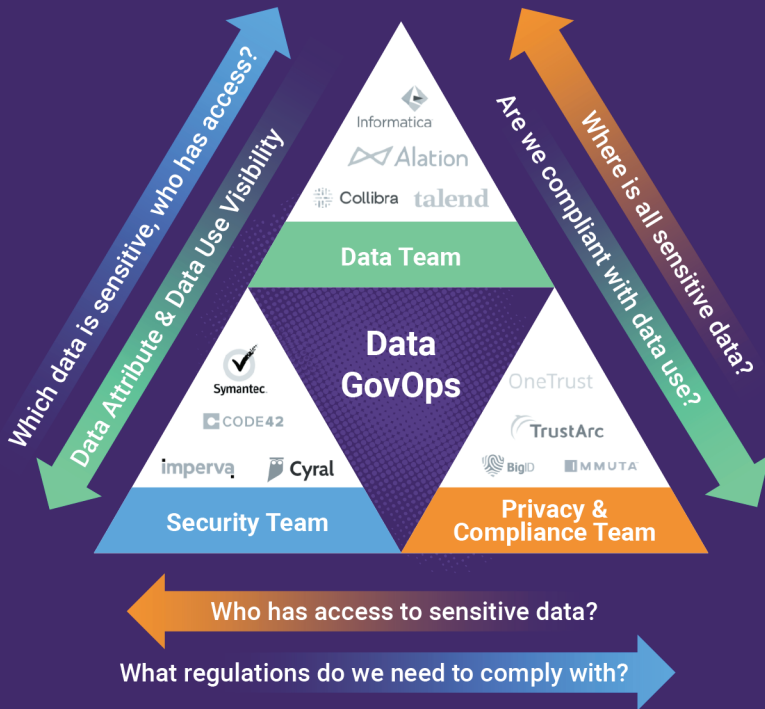

Dasera:
Your DataGovOps Engine

Dasera takes context from your infrastructure, data, and users to continually monitor your Data Preservation, Security, Compliance, Privacy, and Data Management policies. We identify risks at the earliest possible point, and integrate the feedback into the workflows you use today, helping your Security, Compliance, and Data teams collaborate better.

Which data is sensitive, who has access?

Data Attribute & Data Use Visibility

Are we compliant with data use?

Where is all sensitive data?

Informatica
Alation
Collibra
talend

Data Team

Data GovOps

Symantec
CODE42
imperva
Cyral

OneTrust
TrustArc
BigID
IMMUTA

Security Team

Privacy & Compliance Team

Who has access to sensitive data?

What regulations do we need to comply with?

Dasera Automates Your Data Governance

Data Leakage
Insider Threats
Least Privileged
Compliance
Data Misuse
Privacy Violation
Data Sprawl
User Deprovisioning

Data Team
able to use data safely

Security Team
becomes data enabler

Compliance Team
has real time visibility for automated audits

Shift-Left Detection

- Identify risk at source
- Continual infra, data & user monitoring to support your data governance policies

Increased Efficiency

- Fewer & less painful sensitive data and access audits
- Better cross-functional collaboration among Compliance, Security & Data teams

Data Empowerment

- Broader access to more data for more business value
- Higher employee satisfaction
