 - h. Enter partial and full amounts
 - i. Check periodically to ensure counts are saving
 - j. ***If counting insulin, pay attention to quantity. Some insulin measurements may be listed by pin or by box***

Troubleshooting Tips for Pioneer Inventory App:

It may take a few times of entering the server IP address to get logged in. Keep trying and if problems persist follow the below steps in Pioneer:

1. Select Location
2. Select Employee
3. Type employee name
4. Ensure under the security tab they have permission for web portal users

Completion of Inventory Count steps:

1. Once complete, print the final report from inventory valuation. Compare the initial report and send final numbers to the management office
2. Create a new recommended order and make sure that nothing says zero that you know you have (these will be the things that got missed or the scanner didn't catch.) There will be a gap between what your order points are and what you actually have on the shelf after counting. This is the BEST time to look over your order points for your drugs and remove what you don't need on your shelves. If not it will continue to pop up on each order even if you have an equivalent NDC. Remove an order point by following the below steps:
 - a. Right click the drug on the recommended order
 - b. Drop down the options and select never (if you do this it will remove the order point so make sure you are positive of the change.)
 - c. Correct your order baskets by going into each drug and subtracting what you are ordering from the balance on hand (make sure you pick the correct NDC!)
