Problem:

The Mazuin Garage in Fosses, were in need to find a way to stock their prototype pieces in the most ergonomic way. Due to the big dimension of these parts (doors, rooftops, etc.), to handle them was necessary several people every time, and a forklift.

Solution:

This problem have been solved thanks to the Modula LIFT and the option of the Trolley. In this way when they have to make tests they can bring the whole piece (tray included) with the Trolley, without the need of a forklift in the test room.
