Control access to your warehouse floor, distribution centers, and businesses by installing a BeastWire Driver Access Cage.

Prevent accidents from visitors wandering into forklift traffic areas or restricted areas.

Driver Access Cages also protects your inventory from theft by non-employees who are visiting your facility.

AFFORDABLE AND EFFECTIVE

SpaceGuard Driver Security Enclosures are a simple, affordable way of controlling access to your factory floor or warehousing facility. By securing the shipping and receiving dock with a sturdy wire mesh cage it keeps drivers, and delivery personnel from wandering your facility without consent or an escort. Along with improving security, it can also help prevent injuries.

Constructed with our exclusive BEAST 10-gauge welded wire mesh with an Industry Best 10-year structural warranty. Partition walls surround the building entrances containing drivers and visitors to a defined area until met by company personnel. The enclosure's open, yet secure design achieves the desired level of controlled access without the need for additional lighting, HVAC or sprinkler systems.

Driver Security Enclosures can be configured to any desired size; and may be anchored to building walls or free standing. SpaceGuard recommends equipping your Driver Security Enclosure with a panic bar (push bar). Other options include automatic closers, electronic access control and service windows.
