YOUR COOKING INSTRUCTIONS

Our method of reheating, albeit a little different, is tried and tested by our Pie Club lovers...

Reheating: If you have a microwave, remove your pie from the foil base and place in the microwave for approximately 50-60 seconds (depending on the power of your microwave). We've found this helps to bring the filling alive. Then, place in a moderate oven for approximately 10 minutes.

Alternatively: If you don't have a microwave, place directly into a preheated oven at 160C for approximately 20 mins.

Pies can be kept in a fridge for 4 days or frozen immediately. We recommend you defrost fully before reheating.
