LIVE REMOTE MONITORING SYSTEM

For witnessing Factory Acceptance Testing

STATSGROUP.COM

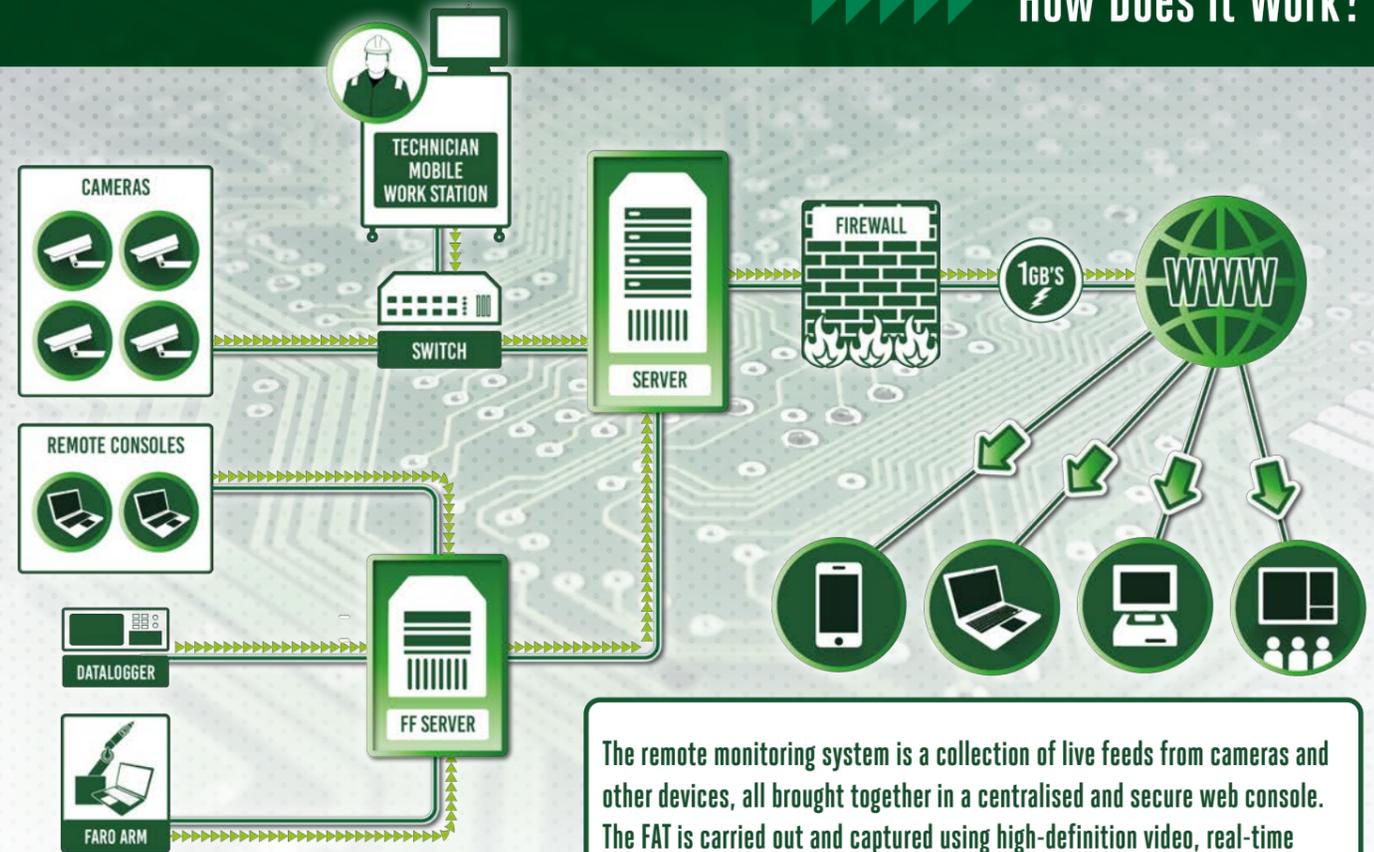

Factory Acceptance Test

Factory Acceptance Testing (FAT) of STATS equipment is an important milestone on every project, providing assurance to our clients the equipment for the workscope is manufactured, assembled and tested to specification and site requirements. Each FAT is conducted in compliance with agreed procedures and witnessed by our clients and, where required, an independent verification body. Using the live remote monitoring system, STATS offer a unique opportunity for clients to witness FAT's without the need to attend our facilities, thereby providing significant savings in travel and accommodation costs and time out of the office.

Live Remote Monitoring System

Cameras capture and record high quality video for live streaming and playback on every aspect of testing. The system also incorporates data feeds from pressure monitoring, data loggers, remote consoles, and coordinate measurement machines. All footage and data is stored securely and available for sharing via a centralised web console to any global location.

The remote monitoring system is a collection of live feeds from cameras and other devices, all brought together in a centralised and secure web console. The FAT is carried out and captured using high-definition video, real-time voice communication and file sharing to allow two-way communications and interaction between clients and our on-site team throughout testing.

BENEFITS

- ▶ Full transparency and reliability throughout the factory acceptance testing process
- ▶ Multiple high definition cameras capture all testing activities
- ▶ Live communication using voice and online chat function
- ▶ No travel or accommodation costs
- ▶ No time out of the office
- ▶ Full traceability of records
- ▶ Easy access to securely stored data

Our Responsibility

STATS is committed to conducting its operations in a manner that safeguards people, property and the environment. Our live remote monitoring system enables factory acceptance testing to be completed and witnessed from anywhere in the world, without the need to travel. This approach allows our clients to reduce their carbon footprint and therefore help to protect the environment.
