FOR IMMEDIATE RELEASE

Zeeco Expands Chinese Operation

USA - BROKEN ARROW, OKLAHOMA – Zeeco, Inc. announced today its further expansion plan for the Chinese market. The investment plan includes a fully functioning new team, a second Shanghai office, and an engineering and fabrication facility which will significantly increase Zeeco’s market position in China.

“The Chinese market is a strategic opportunity for Zeeco’s future business growth. Zeeco has had a dedicated team primarily focused on the power heating and steam business in China for the past seven years and they have had tremendous success serving and growing this market. We are now poised to do the same for the full breadth of our technology portfolio including Process Burners, Flares, and Thermal Oxidizers. We expect our business for these products to grow in the Chinese market with the additional resources now in place,” Darton Zink, President and CEO of Zeeco, said.

The new product group will be led by General Manager, Yuan (Andy) Ma. “We are extremely excited to have Andy and his team as part of the Zeeco family. We look forward to supporting this very important market for many years to come and are in the process of adding additional in-country fabrication facilities as well,” Brent Williamson, Director of Marketing and Business Development for Zeeco, said.

“My team and I are honored to join Zeeco,” said Andy Ma, the former CEO of Keyland and an MIT Sloan Fellow. “Zeeco is a leading technical solution company with a rich history in

industrial combustion technology. Under this new regionalization strategy, we will bring additional Zeeco combustion technology into the Chinese market to better serve our local customers, while supporting sustainable development in China,” Ma, said.

About Zeeco

Founded in 1979, Zeeco has steadily become the world leader in the design and manufacture of advanced combustion and environmental solutions. Headquartered in Broken Arrow, Oklahoma, USA, Zeeco is a privately held business with more than 1,000 employees and global locations on virtually every continent. The company’s engineered systems include ultra-low NOx industrial burners, flares, hazardous waste incinerators, vapor control, and ancillary products for the refining, production, petrochemical, LNG, power, pharmaceutical and biogas industries. ZEECO® products are designed to reduce emissions, optimize processing industries, and maximize operating efficiency while meeting all global environmental compliance requirements. Zeeco also provides comprehensive aftermarket parts, service and engineered solutions as well as rental equipment. Zeeco’s worldwide headquarters is located on a 250 acre campus which includes a 100,000 ft² (9,290 m²) manufacturing facility, and the world’s largest, industrial-scale research and test facilities.
