Queensland Children's Hospital

Asset data management solutions to power efficient facilities operations

"We have 45,000 drawings and more than 20 contractors to manage. RedEye allows us to respond a lot quicker to issues that we have in the hospital, especially the more difficult to find issues."

Bruce Bonney,
Facilities Maintenance Manager,
Children's Health Queensland

At RedEye, we're committed to keeping the world's critical infrastructure running. It's why leading organisations all over the world trust us to help manage more than $250bn in assets globally.

RedEye is a cloud-based solution for managing asset data and engineering drawings that is purpose-built for asset operators and critical infrastructure providers. RedEye gives internal teams, contractors and sub-contractors access to relevant information anywhere from any device, when you need it most.

Our SaaS solutions give hospitals reliable access to current data and insights to enable optimum and efficient facilities management. This ensures teams can focus on what's important – delivering ideal patient care.

RedEye DMS

Asset Data and Engineering Drawing Management System

An interconnected digital ecosystem

RedEye integrates with your existing business infrastructure to power a digital ecosystem that can deliver data and insights for precise decision making and efficient operations.

RedEye's cloud and mobile based technology platforms integrate with, compliment and extend our clients existing ERP, EAM, GIS, Safety and other core business systems. We partner with leading technology companies including Microsoft, IBM, ESRI and AWS. RedEye works with global and specialist systems integrators and consulting firms, including KPMG, to extend our reach and value globally.

RedEye's integration with Microsoft Office365 allows you to store, edit and collaborate on all asset documentation from within your RedEye platform. You can view and edit associated asset manuals, configuration guides and permits in Microsoft Office365 all in the same location, ensuring accurate decisions, timely work and safe operations.

Powering a single source of data truth

Your teams can get quick and easy access the correct data and drawings information without duplication of data in external locations. Controlling versions ensures that you're working with the latest, most up-to-date information available, which is even more important when working between internal teams, contractors and field operating staff.

"This precinct of the hospital is 359 beds. You want your child to be looked after instantly, in this moment. And that's the number one priority. If I can have the facilities working ASAP to allow that to happen in some way shape or form then that is a fabulous outcome."

Detlef Murac,
Building Document Coordinator,
Children's Health Queensland.

Delivering the insights you need when you need them the most

RedEye has native iOS and Android apps which allow users to quickly access the platform from their mobile phone, tablet or web browser. This allows digital red pen mark-ups, automated workflows, digital signatures, multimedia attachments and more, from the office, in the field and at the asset.
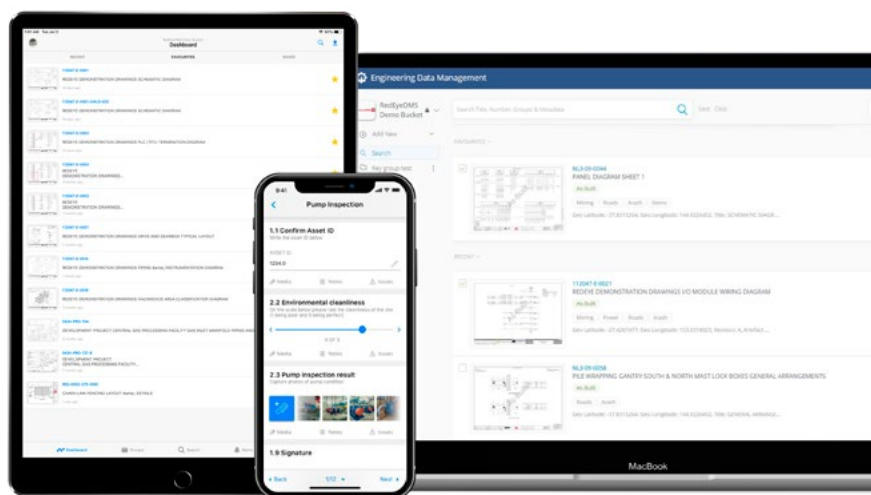

Like any popular search engine, RedEye connects you to a network of information. Highly relevant search results are based on more than just document titles. With native file extraction, enhanced manual processes and Optical Character Recognition (OCR), RedEye uses embedded metadata, allowing users to filter and set conditions to find relevant results with ease.

Minimising risk to help you keep your people safe

Ensuring version control means you are assured anyone accessing asset data and drawings is referring to the most current information. This allows you to protect your workforce, execute safe maintenance work and minimise the risk of workplace safety incidents.

With a structured and controlled system, you can maintain regulatory data compliance whilst allowing the right people in your organisation access to the information they need, without wasting time searching for the latest versions.

Plan and execute safe and efficient maintenance and response work. With quick access to the most current asset data and engineering documents you can keep facilities operational and minimise downtime.

About RedEye

RedEye is a technology company founded in Australia in 2012. Our vision is to make the world's critical infrastructure safer, easier and more efficient to operate and maintain. Today RedEye has six offices globally and helps our clients manage over $250 Billion in large complex assets and critical infrastructure.

Our Software as a Service (SaaS) solutions including our engineering data management, asset and work management, bushfire risk management and digital twin solutions and our technology, process optimisation and change management consulting services are purpose-built for asset owners.

RedEye partners with the world's leading asset owners in utilities, resources, government, defence, healthcare and infrastructure to enable digital transformation in digital engineering, digital twin, asset management, analytics and bushfire risk management by making their asset data more available, usable and valuable.

RedEye's cloud and mobile based technology platforms integrate with, complement and extend our clients existing ERP, EAM, GIS, Safety and other core business systems.

RedEye partners with leading technology companies including Microsoft, IBM, ESRI and AWS. We also partner with global and specialist systems integrators and consulting firms including KPMG to extend our reach and value globally.

RedEye's team and partners have developed deep domain and subject matter expertise working with numerous asset owners and critical infrastructure operators and are available to share best practice solutions, knowledge and processes.
