RedEyeDMS & Ellipse EAM

Integrate Ellipse EAM & DMS for seamless access to critical asset data.

"Ellipse EAM customers can now access RedEye's proven drawing management capabilities without leaving their asset management system. This integration extends the value, accessibility and useability of customer asset data."

Wayne Gerard,
Founder and CEO,
RedEye

Maximise your Ellipse EAM investment with RedEyeDMS

Managing complex assets and critical infrastructure at scale requires an interconnected view. When asset and operational data is seamlessly integrated, organisations can draw insights required to improve planning, compliance, reporting and overall performance. This integration between Ellipse® Enterprise Asset Management (EAM) and RedEye DMS combines proven drawing and document management capabilities with world-class asset management capabilities.

A single source of truth for asset data and artefacts

RedEye DMS and Ellipse EAM

Users of Ellipse EAM can now make their asset engineering data more available, usable, and valuable, through this new integration with RedEye DMS.

The integration helps to instil best practices and processes to help organisations manage, maintain and optimise critical assets throughout their lifecycle.

RedEye and Ellipse EAM

- **Directly Launch RedEye from Ellipse EAM**

  Access relevant engineering documents, drawings and media for a particular piece of equipment in the Ellipse Equipment Register Application, or other applications such as Work Orders and Work Requests.

- **Improve Productivity**

  Minimise search time, as the application automatically populates the search criteria for a particular piece of equipment, then returns the relevant information.

- **Reduce the time and cost of re-drafting**

  Drawings can be marked up in RedEye, with changes available seamlessly, in real time. Keeping drawings current, cuts down the need to re-draft them.

- **Reduce Risk**

  Ensure all relevant Ellipse EAM users have access to the most up-to-date version of critical asset-related artefacts.
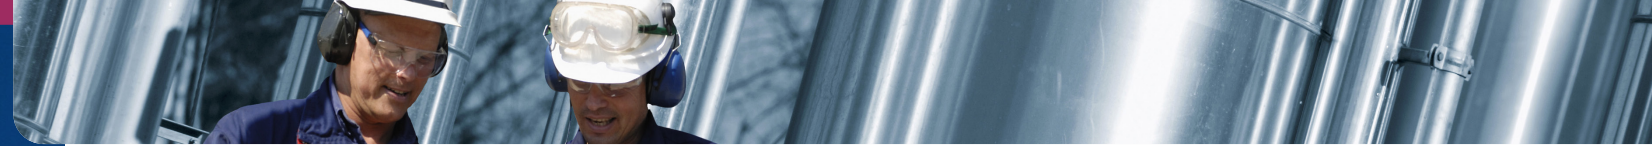

- **Find Information Faster**

  Save time by staying in the system you know, to access the asset documents, drawings and media you need.

- **Enhance Existing Workflows**

  Integrating key asset data within existing workflows ensures the value of asset data increases over time.

- **A secure, integrated digital ecosystem**

  As well as integrating with Ellipse EAM, RedEye compliments and extends DMS functionality into your existing ERP, GIS, safety and other core business systems.

Integrating DMS + EAM capabilities enables critical asset data that is available anytime, anywhere.

Business responsiveness is becoming more critical in the current Enterprise Application landscape, creating disconnected applications that can hinder organisations when responding to changing business needs.

In addition, there is a growing requirement for data to be managed and shared across the organisation more rapidly to ensure that the User has the correct information at the right time and in the right place.

For this reason, integration has become essential.

Why Integrate?

Integrating **RedEyeDMS** with Ellipse EAM provides a secure, centralised document and drawing management solution for critical assets.

Centralising the management of these files ensures data accessibility between departments, third-party contractors and external companies. In addition, bringing the two systems together provides information quickly from within Ellipse EAM.

About **RedEye**

RedEye is a technology company founded in Australia in 2012, our vision is to make the world's critical infrastructure safer, easier and more efficient to operate and maintain. Today RedEye has six offices globally and helps our clients manage over $350 Billion in large complex assets and critical infrastructure.

Our Software as a Service (SaaS) solutions, including our engineering data management, asset and work management, bushfire risk management, digital twin solutions, and our technology, process optimisation, and change management consulting services, are purpose-built for asset owners.

RedEye partners with the world's leading asset owners in utilities, resources, government, defence, healthcare and infrastructure to enable digital transformation in digital engineering, digital twin, asset management, analytics and bushfire risk management by making their asset data more available, usable and valuable.

RedEye's cloud and mobile-based technology platforms integrate with, complement and extend our clients existing ERP, EAM, GIS, Safety and other core business systems. RedEye partners with leading technology companies, including Microsoft, IBM, ESRI and AWS. We partner with global and specialist systems integrators and consulting firms, including KPMG, to extend our reach and value globally.

RedEye's team and partners have developed deep domain and subject matter expertise working with numerous asset owners and critical infrastructure operators and are available to share best practice solutions, knowledge and processes.

To find out more about this and other RedEye integrations please contact our RedEye Partnerships team.
