

*Vectra Corporation conducted a review of*

In accordance with the requirements documented in the Payment Card Industry Data Security Standard (PCI DSS) Version 2.0 and the associated QSA program, an onsite application security review of the cloud based reservation application, RMS version 9, was conducted during March 2012. The primary intent of this assessment was to verify that the RMS application does not store, process or transmit cardholder data.

RMS Version 9 is considered to be “out of scope” for PCI DSS and PA DSS certification. The cloud based reservation application “RMS version 9”, does not store, process or transmit cardholder data.

Since RMS do not store, process or transmit cardholder data and card based payments are not processed using a merchant agreement owned by RMS, PCI DSS is not applicable.
