Backend .NET Developer – Intermediate (Vancouver)

Snipp is a fast-growing publicly listed company focused on building promotions, loyalty and shopper marketing technology solutions for brands. We work with some of the largest brands and agencies in North America and increasingly internationally and produce cutting-edge campaigns for them.

We're looking for smart, entrepreneurial people who enjoy challenges and working on cutting edge technology – no one will be holding your hand here. In exchange, we promise to pay you fairly, give you flexibility in how/ where you work, present you with lots of challenges so you will never be bored and oh yeah, give you real stock options in a public company (so they're actually worth something already).

We're looking for a talented C# developer who has a strong web and windows application development background to join our SnippCheck team – it is a very dynamic, fast paced Agile Software Development environment. We love coding, we are eager to utilize the most advanced technology to develop our products and we proactively keep our knowledge up to date from every single project we build. We work smart, we work hard, and we are having fun.

Key Technical Requirements:

- Minimum 3 years of .Net C# Development experience on
    - WCF Service or Restful API
    - Windows Service
    - Entity Framework
- Minimum 2 years of development experience with:
    - MS SQL database - Stored Procs, Indexing, Advanced Queries, and Triggers
    - Multi thread applications
    - Transact-SQL
- Ability to create and maintain C# applications using best practices and patterns
- Clear understanding of OOP concepts and best practices
- Excellent problem-solving and critical thinking skills.
- Familiarity with iterative software development and JIRA
- Experience with highly scalable / high traffic solutions
- Excellent communication skills.
- Team player who can help colleagues as well as work independently
- Excellent time management skills

Bonus Qualifications:

- Experience with MVC
- Experience with modern front-end ecosystem and concepts e.g. Angular
- Experience with Agile development methodologies e.g. scrum sprint planning

Position Responsibility:

- Windows Service, Database and Web API enhancement, re-design and implementation
- Get involved in web application related architecture decision and workflow review
- Transactional Database design and Implementation
- Make recommendations of technology best practice to team members and project managers and incorporate approved recommendations into work.
- Promote & develop relevant and emerging technologies that enhance our web platforms capabilities.
