

Citrix ADM service

Simplify app delivery, infrastructure management, and analytics across multi-cloud

Cloud-based controller for your Citrix ADC fleet across multi-cloud

Manage, monitor, and troubleshoot your entire global application delivery infrastructure from a unified cloud-based console.

Citrix ADM service provides:

- Reduced complexity and cost
- A single control and management plane
- Nothing to install or maintain
- Always available and up to date with the latest features

Consistent security posture across multi-cloud

Maintain consistent security policies for all your apps across on-premises and public clouds.

Citrix ADM service provides:

- Centralized place to define your policies for your web application firewall, bot management, and API security
- Easier compliance and governance

Augmented decision making

Empower your decision making with actionable insights enabled by the latest AI/ML techniques.

Citrix ADM service provides:

- Machine learning-driven anomaly detection and root-cause analysis
- Predictive modeling for capacity planning
- Predictive auto-scaling in AWS and Azure
- Proactive security alerts for potential vulnerabilities

Workflow automation for speed and simplicity

Eliminate manual processes with automated application delivery workflows.

Citrix ADM service provides:

- Automated workflows to deploy Citrix ADC in public cloud
- Automated onboarding of your Citrix ADC fleet
- Scheduled upgrades for your Citrix ADC instances
- Self-healing infrastructure for detecting and diagnosing issues and suggesting remediation
