A2V

Supplier Security Program

Cyber-supply chain risk management framework for critical suppliers.

🔍 Validated   ⚙ Operationalized   👁 Continuously Monitored   ✓ Compliant

---

A2V

Look for the badge. A2V badging indicates that suppliers are monitoring their supply chain enabling compliance with NIST SP 800-161.

Supports NIST SP 800-161 Compliance

The A2V Supplier Security Program supports compliance with NIST SP 800-161 and follows the enterprise risk management process.

Supply chain risk management controls have been mapped to ensure compliance with the following regulations: DoDI 5000.90, NIST SP 800-53, NIST SP 800-171, NIST 800-161, NDAA 2019 Section 889(a)(1), Executive Order 14028.

Operationalize third party risk management in compliance with DoD, NIST and NDAA requirements.

Fortress provides cyber supply chain risk management solutions that help secure over 40% of the US power grid and sectors including Energy, Aerospace & Defense, Manufacturing, Telecom, Pharmaceuticals, Transportation, and others. Fortress was awarded an SBIR Phase III for its supply chain risk management solutions.

Validated. Fortress A2V validation entails rigorous review and continuous monitoring of supply chain risk to ensure enrolled organizations have an effective toolset for identifying and remediating cyber risk associated with third party vendors

Fortress A2V is a web based platform that provides risk illumination by leveraging machine learning to interpret information from public, private, and proprietary data sources. A2V enables automated and real-time vendor profiles, illuminating risk from compliance, cybersecurity, and foreign influence.

Operationalized. A2V has created a methodology that defines inherent cyber risk from products and services, applied the inherent risk methodology to carry out a criticality ranking of suppliers and maintained basic C-SCRM controls as indicated by authoritative sources.

Continuously Monitored. A2V badged suppliers continuously monitor supply chain risk to uncover application security vulnerabilities, security protocol health, geolocation, and patching cadence. Foreign ownership monitoring uncovers security incidents, recent mergers and acquisitions. Compliance monitoring uncovers safety, environmental, labor, and privacy complaints. A2V scans for a broad range of controls including breaches, dark web activity, known compromised assets, and domain name server configurations.

FORTRESS

Fortress guides critical enterprises to discover, prioritize, and monitor supply chain cyber risk.
