

## CLINICAL WORKFLOW SOLUTIONS

### MedRec Ambulatory

#### Overview:

**The MedRec Ambulatory solution improves and simplifies medication reconciliation by consolidating all patient medications into a single easy to read master list. This includes outpatient, inpatient, remote and non-VA medications. The list is grouped alphabetically by indication, making it easy for practitioners to compare similar meds side by side, reducing the potential for error.**

**The solution can be used in the outpatient setting to print a patient-friendly pre-appointment medication list, create customized medication lists for patients, provide patients with non-VA prescriptions, and organize and print medications in a pillbox planner view.**

**The solution may be utilized by itself for medication reconciliation purposes, or combined with the Outpatient TurboNote solution for further benefits.**

#### Benefits and Features:

##### Team Based Approach

- Enables sharing across all hospital settings including ambulatory care, ER, admission/discharge and CLC
- Tracks all changes including who last reviewed the medication(s)
- Includes an area for provider-to-provider communication

## Clinical Workflow Solutions

### MedRec Ambulatory

#### Benefits and Features:

##### Single Master List

- Displays inpatient, outpatient and non-VA medications from any VA source throughout the country
- Medications are grouped alphabetically by indication, which allows for comparison of similar medications side by side
- Additional sorting of medications can be performed to order alphabetically, by status or by source

##### Medication Adherence

- Users can easily see the number of refills remaining and the date the patient last filled the medication(s) to gauge compliance

##### Medication Reconciliation

- Enables the creation of customized lists for patients (new, continue, change, hold, discontinue, etc)
- Additional notes can be entered regarding each medication, which is saved in the system and also printed on the list given to the patient
- Indications can be customized by patient and saved within the system
- Creates emails to remote facilities to discontinue remote medications

##### Prescription Pad

- Creates and prints non-VA prescriptions as well as orders for services to be performed outside the VA (x-rays, CT scans, etc.)

##### After Visit Summary

- Prints a patient-friendly list that emphasizes new, changed and discontinued medications, which are organized by indication with notes included
- Generates multiple print formats that can be given to the patient (i.e. wallet size, pillbox planner)
- The after visit summary can be customized by facility or by individual patient to include not only the updated post-appointment medication list, but also future scheduled appointments, vital signs, labs and immunization information
- Generates a note which can easily be copied and pasted into CPRS, or sent electronically to a specific note in CPRS
