

Improve Compliance, Reduce Infections

Consistent hand hygiene is the first and most important action caregivers take in the battle against hospital-acquired infections (HAIs).

SwipeSense helps healthcare organizations cost-effectively manage infection control and create lasting behavior change. Utilizing smart sensors, modern digital applications, and change management expertise, SwipeSense delivers a safer environment for caregivers and patients.

100,000

infection related deaths per year

What is your
hospital doing to
stop infections?

areas for
improvement

Multi-facility
and facility-wide
compliance change

Soap versus sanitizer usage

The SwipeSense System

Caregiver Badges

Each individual caregiver wears an unobtrusive badge that simply clips behind existing ID cards. This badge acts as a unique identifier while also collecting data.

Hygiene Sensors

Hygiene Sensors are located under every soap and sanitizer dispenser throughout the facility. The technology is embedded inside the drip tray, and works with both manual and automatic soap dispensers.

Each time a dispenser is activated, the closest caregiver is credited for that hygiene event.

Location Hubs

Location Hubs are located in all patient rooms or designated zones. These beacons record caregivers' room entries and exits.

Due to their sleek design and compact size, Location Hubs use a single wall socket making installation discrete and agile.

Communication Hubs

All data is transmitted wirelessly to Communication Hubs placed in centralized locations.

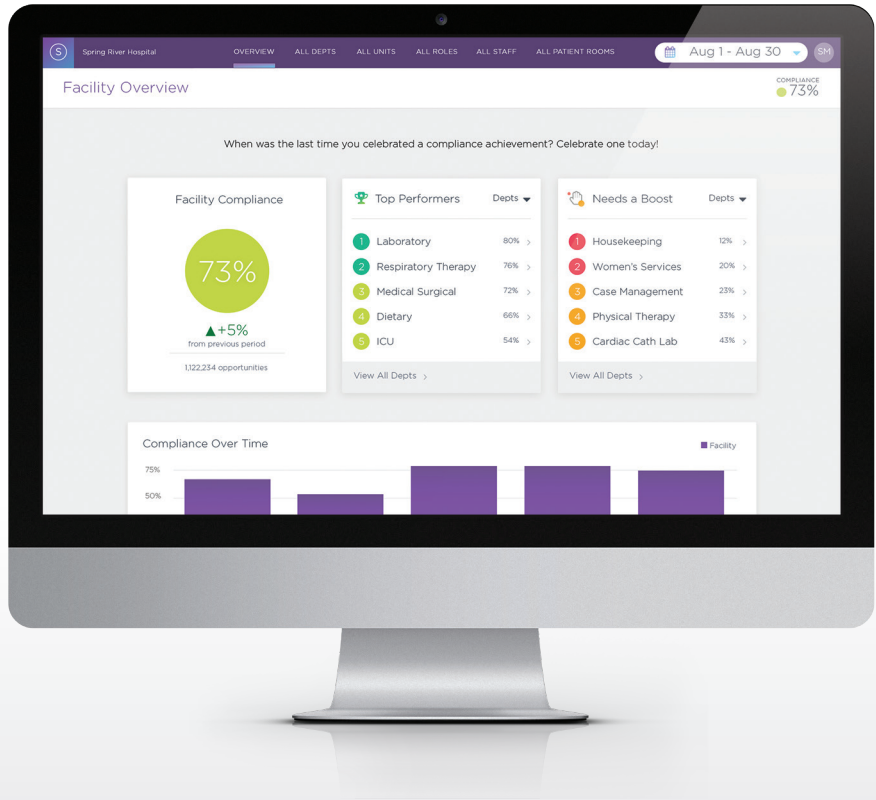

From there, all your hand hygiene compliance information moves to secure servers for further analysis. Communication Hubs only require a single wall socket, further easing the implementation process.

49%

Reduction in infections
(MRSA, CLBSI, CAUTI, CDIFF)
experienced by a hospital over
12 months using SwipeSense

The complete hand hygiene solution

SwipeSense makes pen and paper observations a thing of the past by offering a modern, accurate, insightful system designed for caregiver workflows and operational improvement.

CAREGIVER ACCOUNTABILITY

SwipeSense offers direct feedback, which ensures hand hygiene is a forethought for every patient interaction. Accurate measurement leads to accountability and lasting change.

COLLABORATIVE CHANGE

SwipeSense helps trend long-term changes for Infection Control so quality care can be recognized with positive feedback, while improved compliance is made visible for everyone.

ACCURATE MEASUREMENT

SwipeSense provides a far more accurate assessment of compliance than direct observation, allowing vast amounts of data to be collected with no staff involvement.

“SwipeSense gave us the data we needed to encourage more diligent behavior.”
