Employer challenges

These challenges consume significant effort and time.

Key questions for employers

- How much does my company invest annually in people, and is it sustainable for all employee segments?
- Can an optimized set of investments improve employee engagement and reduce turnover?
- How can I help our people more effectively manage and use these annual investments?
- How can we control these costs for our business more effectively than our competitors, while increasing VOI and ROI?
- What can my company do to help employees see the connections between the decisions made regarding their health and outcomes with performance and wealth, and become better consumers?
- How can I turn **data** to **information** into **knowledge** to drive **action**?

What if a different approach could more easily address these questions?

DO WE REALLY UNDERSTAND EMPLOYEES' USE OF HEALTH BENEFITS?

Understanding human behaviors

- Bandwidth tax: a consequence of tunneling, manifested by neglect for other concerns

Analysis of low-wage worker healthcare use

Objective

To determine whether (and to what extent) health care utilization patterns varies based on wage status

Subjects

Employees continuously enrolled in RightOpt (2014)

Data Evaluated

- Demographics, including wage status
- Out-of-pocket costs as a percentage of wage
- Non-use of healthcare services
- Healthcare utilization patterns and costs

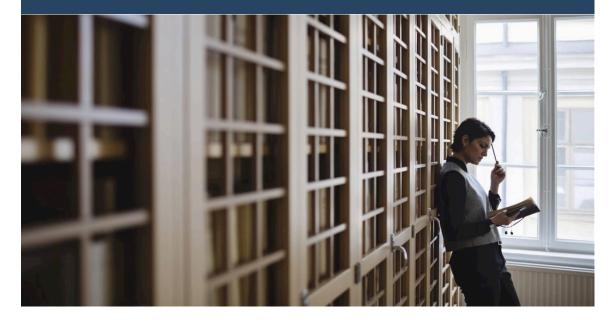

Analytics Approach

Rigorous statistical methodology

Wage quartiles by total counts, with lowest quartile subdivided for greater detail

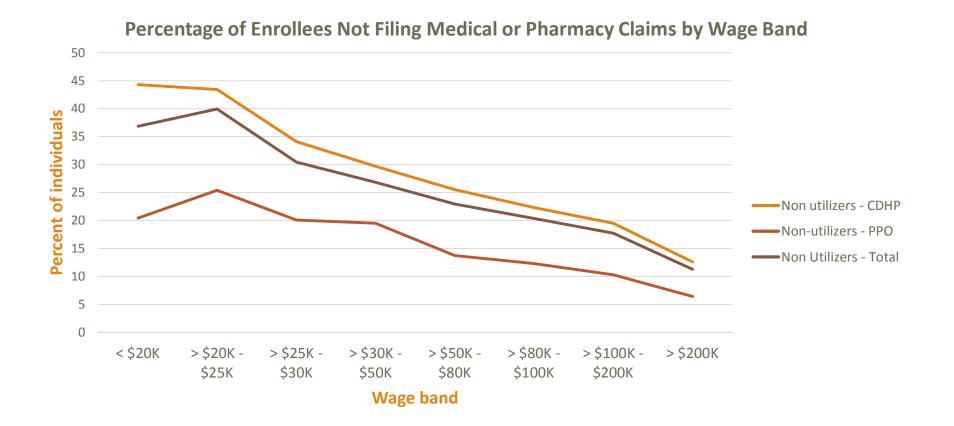

Our findings...

- Have implications on both benefit design and engagement
- Set the stage for evaluating the human capital impact on business outcomes

HOW CAN DATA BE USED TO BETTER INFORM EMPLOYER HR/BENEFITS STRATEGY IN RELATION TO BUSINESS PERFORMANCE?

Workforce well-being has significant business implications beyond physical health

Working Population	Thriving in Physical Only (n=386)	Thriving in All 5 Elements (n=839)	Compared to Adults Thriving in just Physical, Those Thriving in all 5 Elements:
Average unhealthy days per month	0.81	0.48	 Have 41% less absenteeism
Involved in accident resulting in WC claim	1.4%	0.5%	 Are 65% less likely to be involved in workplace accident
If job market improves, intent to look for new job	39.2%	7.3%	 Are 81% less likely to move when the job market improves

Employees Thriving in Multiple Well-Being Elements Have Lower Health-Related Costs One Year Later

Healthier employees have significantly higher job performance ratings

Club/Health Index	Number (2012-14)	Avg. Rating (scale 1-4; higher=better)		
Platinum	172	3.68		
Gold	681	3.54*		
Silver	286	3.47*		
Bronze	14	3.37*		
*significant at n< 05 relative to Platinum group				

*significant at p<.05 relative to Platinum group

What should be the employer's responsibility for workforce well-being – and overall health status?

Reporting challenges

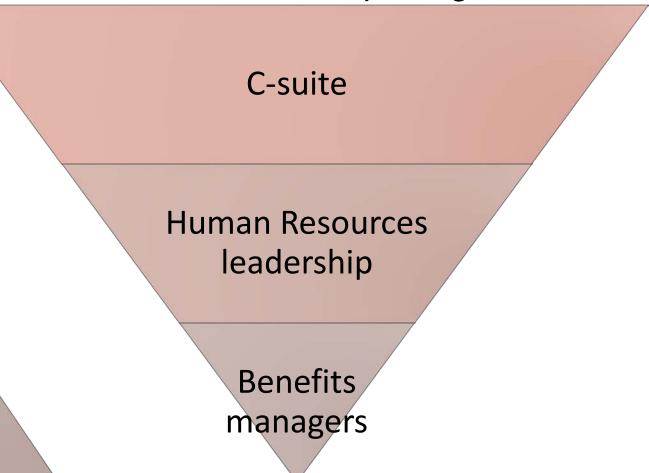

Level of analytics

Human capital analysis- workforce health as a business strategy

Deeper analysis – benefit design implications, workforce well-being considerations

Tactical reporting - cost drivers, clinical condition priorities, trends

Audience for reporting

Summary

Using data analytics to guide human capital management approach can:

- help to identify unrecognized cost drivers/patterns (social determinants of health)
- lead to innovative solutions
- More closely align health benefits to yield greater business value

Expanded integration of data sources can facilitate the process, by:

- revealing previously unrecognized links
- better identifying cost drivers
- providing a way to monitor impact of interventions
