

SCOPE

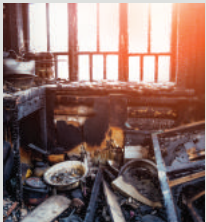

SCOPE, CORE's Remote Estimating Desk is designed to create a unified reconstruction estimate experience for contractors and clients alike.

REMOTE ESTIMATING SOLUTIONS

Improved Processes: Streamlined processes for standard large-scale projects, allows team to spot errors immediately. This ability to catch conflicts without delay means non-value-adding activities are all but eliminated from the project timeline.

Lower costs: By reducing errors, and project cycle-time SCOPE provides substantial cost savings and improved tenant and client satisfaction.

Reduced timelines: Decrease turnaround time significantly due to rapid estimating process and fewer project delays keeping everything on or ahead of schedule.

Coordinated efforts: Changes to the project are instantly conveyed from the office to workers in the field, who carry electronic devices. This reduces errors, prevents confusion, and reduces time-consuming change orders.

Benefits of Outsourcing: Outsourcing your estimating efforts to SCOPE, allows you to turn around twice as many estimates in half the time. Our staff of remote estimators works tirelessly doing nothing but estimating, sketch, and scope development.
