

U.S. DIY & Home Improvement SEO, Decoded

What we learned by reverse engineering the search algorithms for six major U.S. DIY & home improvement retailers.

Optimizing your products for search is essential for winning shoppers online and boosting sales. However, it's easy for brands to waste time and money over-engineering their content for search optimization.

Using our daily digital shelf data and advanced mathematical modeling, Profitero reverse engineered the algorithms for six major U.S. DIY & home improvement retailers.

Doing so allowed us to isolate the content factors that most influence search rank performance, specific to each website.

Profitero's research shows that not all content changes have equal search impact across every retailer. Therefore, it's important to have a targeted SEO strategy — one that uses advanced analytics to predict retailer outcomes in advance.

I. Which SEO strategies work best for different retailer websites?

● **Highly correlated** (with higher search ranking) ● **Somewhat correlated** ● **Not correlated** (and may have negative impact)

	# of reviews	# of images on product page	# of times keywords are mentioned in title	product's average star rating	# of characters in product title
Amazon.com	Highly correlated	Highly correlated	Not correlated	Highly correlated	Not correlated
Build.com	Highly correlated	Highly correlated	Highly correlated	Not correlated	Somewhat correlated
HomeDepot.com	Highly correlated	Somewhat correlated	Highly correlated	Not correlated	Not correlated
Lowe's.com	Highly correlated	Highly correlated	Highly correlated	Highly correlated	Highly correlated
Walmart.com	Highly correlated	Not correlated	Not correlated	Not correlated	Not correlated
Wayfair.com	Highly correlated	Highly correlated	Somewhat correlated	Highly correlated	Not correlated

II. What search-optimized DIY & Home Improvement content looks like by retailer

By retailer, we identified product content attributes that had the highest probability of improving search ranking on specific retailer websites. This is just a sample of our data for the retailers we studied. Profitero can create a similar SEO reverse-engineering analysis for any retailer you're focused on.

Product content attribute

Benchmark to aim for

Benchmark to aim for

Product title

- Mention most relevant search term **1 time**
- Title of **~107 characters** in length

- Mention most relevant search term **1 time**
- Title of **~74 characters** in length

Image count

- **7 images**

- **4 images**

Review count

- Best-performing products had **7,427+ reviews**

- Best-performing products had **50+ reviews**

Avg star rating

- **4.6 stars** or higher

- **4.3 stars** or higher

About Profitero

Profitero's analytics platform helps you monitor and improve the health of your eCommerce business, across hundreds of unique retailer sites and 50 markets worldwide. Using our digital shelf benchmarking tools and sales analytics you'll see where you're losing ground to competitors and what you need to improve in order to win more traffic, convert more shoppers and grow faster.

Contact us to learn how we are helping the world's leading brands grow their online sales 1.7x faster than competitors.

Methodology

To produce this report, Profitero analyzed six weeks worth of search placement and content data, collected daily across the retailers' websites (a total of 1.47 million instances on 238 keywords).

Dates for the data analyzed: Oct 5 - Nov 16, 2021

Placement and content data were cross-referenced, matching products appearing on search results with their respective product content. The correlation between content and search placement allowed us to understand attributes that may cause a product to rank highly on a retailer's website. For the purpose of this analysis, we only examined the impact that content has on search. Other factors such as price, promotional activity, availability and sales history may also contribute to a retailer's search performance.
